# CHAPTER 1

---

## Note

---

this library is not under active development by sammchardy. however, the community has been actively contributing lots of PRs. If you find missing features please submit a PR. please keep PRs small and non-breaking.

This is an unofficial Python wrapper for the [Binance exchange REST API v3](#). I am in no way affiliated with Binance, use at your own risk.

If you came here looking for the [Binance exchange](#) to purchase cryptocurrencies, then [go here](#). If you want to automate interactions with Binance stick around.

If you're interested in Binance's new DEX Binance Chain see my [python-binance-chain library](#)

**Source code** <https://github.com/sammchardy/python-binance>

**Documentation** <https://python-binance.readthedocs.io/en/latest/>

**Binance API Telegram** [https://t.me/binance\\_api\\_english](https://t.me/binance_api_english)

**Blog with examples** <https://sammchardy.github.io>

Make sure you update often and check the [Changelog](#) for new features and bug fixes.

## CHAPTER 2

---

### Features

---

- Implementation of all General, Market Data and Account endpoints.
- Simple handling of authentication
- No need to generate timestamps yourself, the wrapper does it for you
- Response exception handling
- Websocket handling with reconnection and multiplexed connections
- Symbol Depth Cache
- Historical Kline/Candle fetching function
- Withdraw functionality
- Deposit addresses
- Margin Trading
- Futures Trading
- Support other domains (.us, .jp, etc)

Register an account with Binance.

Generate an API Key and assign relevant permissions.

```
pip install python-binance
```

```
from binance.client import Client
client = Client(api_key, api_secret)

# get market depth
depth = client.get_order_book(symbol='BNBBTC')

# place a test market buy order, to place an actual order use the create_order_
↳function
order = client.create_test_order(
    symbol='BNBBTC',
    side=Client.SIDE_BUY,
    type=Client.ORDER_TYPE_MARKET,
    quantity=100)

# get all symbol prices
prices = client.get_all_tickers()

# withdraw 100 ETH
# check docs for assumptions around withdrawals
from binance.exceptions import BinanceAPIException, BinanceWithdrawException
try:
    result = client.withdraw(
        asset='ETH',
        address='<eth_address>',
        amount=100)
except BinanceAPIException as e:
    print(e)
except BinanceWithdrawException as e:
```

(continues on next page)

(continued from previous page)

```
    print(e)
else:
    print("Success")

# fetch list of withdrawals
withdraws = client.get_withdraw_history()

# fetch list of ETH withdrawals
eth_withdraws = client.get_withdraw_history(asset='ETH')

# get a deposit address for BTC
address = client.get_deposit_address(asset='BTC')

# start aggregated trade websocket for BNBBTC
def process_message(msg):
    print("message type: {}".format(msg['e']))
    print(msg)
    # do something

from binance.websockets import BinanceSocketManager
bm = BinanceSocketManager(client)
bm.start_aggrtrade_socket('BNBBTC', process_message)
bm.start()

# get historical kline data from any date range

# fetch 1 minute klines for the last day up until now
klines = client.get_historical_klines("BNBBTC", Client.KLINE_INTERVAL_1MINUTE, "1 day_
↪ago UTC")

# fetch 30 minute klines for the last month of 2017
klines = client.get_historical_klines("ETHBTC", Client.KLINE_INTERVAL_30MINUTE, "1_
↪Dec, 2017", "1 Jan, 2018")

# fetch weekly klines since it listed
klines = client.get_historical_klines("NEOBTC", Client.KLINE_INTERVAL_1WEEK, "1 Jan,_
↪2017")
```

For more check out the documentation.

## CHAPTER 4

Donate

---

If this library helped you out feel free to donate.

- ETH: 0xD7a7fDdCfA687073d7cC93E9E51829a727f9fE70
- LTC: LPC5vw9ajR1YndE1hYVeo3kJ9LdHjcRCUZ
- NEO: AVJB4ZgN7VgSUtArCt94y7ZYT6d5NDfpBo
- BTC: 1Dknp6L6oRZrHDECRedihPzx2sSfmvEBys

If you use [Binance Chain](#) check out my [python-binance-chain](#) library.

If you use [Kucoin](#) check out my [python-kucoin](#) library.

If you use [IDEX](#) check out my [python-idex](#) library.

## 5.1 Contents

### 5.1.1 Getting Started

#### Installation

`python-binance` is available on [PYPI](#). Install with `pip`:

```
pip install python-binance
```

#### Windows

If you see errors building Twisted indication Microsoft Visual C++ is required you may need to install the Visual C++ Build Tools refer to the [Python Wiki on Windows Compilers](#) for your relevant version.

#### Register on Binance

Firstly [register an account with Binance](#).

#### Generate an API Key

To use signed account methods you are required to [create an API Key](#).

## Initialise the client

Pass your API Key and Secret

```
from binance.client import Client
client = Client(api_key, api_secret)
```

## Making API Calls

Every method supports the passing of arbitrary parameters via keyword matching those in the 'Binance API documentation' <<https://github.com/binance-exchange/binance-official-api-docs>>'. These keyword arguments will be sent directly to the relevant endpoint.

Each API method returns a dictionary of the JSON response as per the [Binance API documentation](#). The docstring of each method in the code references the endpoint it implements.

The Binance API documentation references a *timestamp* parameter, this is generated for you where required.

Some methods have a *recvWindow* parameter for [timing security](#), see [Binance documentation](#).

API Endpoints are rate limited by Binance at 20 requests per second, ask them if you require more.

## API Rate Limit

Check the `get_exchange_info()` call for up to date rate limits.

At the current time Binance rate limits are:

- 1200 requests per minute
- 10 orders per second
- 100,000 orders per 24hrs

Some calls have a higher weight than others especially if a call returns information about all symbols. Read the '[official Binance documentation](#)' <<https://github.com/binance-exchange/binance-official-api-docs>>' for specific information.

## Requests Settings

*python-binance* uses the [requests](#) library.

You can set custom requests parameters for all API calls when creating the client.

```
client = Client("api-key", "api-secret", {"verify": False, "timeout": 20})
```

You may also pass custom requests parameters through any API call to override default settings or the above settings specify new ones like the example below.

```
# this would result in verify: False and timeout: 5 for the get_all_orders call
client = Client("api-key", "api-secret", {"verify": False, "timeout": 20})
client.get_all_orders(symbol='BNBBTC', requests_params={'timeout': 5})
```

Check out the [requests documentation](#) for all options.

## Proxy Settings

You can use the Requests Settings method above

```
proxies = {
    'http': 'http://10.10.1.10:3128',
    'https': 'http://10.10.1.10:1080'
}

# in the Client instantiation
client = Client("api-key", "api-secret", {'proxies': proxies})

# or on an individual call
client.get_all_orders(symbol='BNBBTC', requests_params={'proxies': proxies})
```

Or set an environment variable for your proxy if required to work across all requests.

An example for Linux environments from the [requests Proxies documentation](#) is as follows.

```
$ export HTTP_PROXY="http://10.10.1.10:3128"
$ export HTTPS_PROXY="http://10.10.1.10:1080"
```

For Windows environments

```
C:\>set HTTP_PROXY=http://10.10.1.10:3128
C:\>set HTTPS_PROXY=http://10.10.1.10:1080
```

## 5.1.2 Binance Constants

Binance requires specific string constants for Order Types, Order Side, Time in Force, Order response and Kline intervals these are found on *binance.client.Client*.

```
SYMBOL_TYPE_SPOT = 'SPOT'

ORDER_STATUS_NEW = 'NEW'
ORDER_STATUS_PARTIALLY_FILLED = 'PARTIALLY_FILLED'
ORDER_STATUS_FILLED = 'FILLED'
ORDER_STATUS_CANCELED = 'CANCELED'
ORDER_STATUS_PENDING_CANCEL = 'PENDING_CANCEL'
ORDER_STATUS_REJECTED = 'REJECTED'
ORDER_STATUS_EXPIRED = 'EXPIRED'

KLINE_INTERVAL_1MINUTE = '1m'
KLINE_INTERVAL_3MINUTE = '3m'
KLINE_INTERVAL_5MINUTE = '5m'
KLINE_INTERVAL_15MINUTE = '15m'
KLINE_INTERVAL_30MINUTE = '30m'
KLINE_INTERVAL_1HOUR = '1h'
KLINE_INTERVAL_2HOUR = '2h'
KLINE_INTERVAL_4HOUR = '4h'
KLINE_INTERVAL_6HOUR = '6h'
KLINE_INTERVAL_8HOUR = '8h'
KLINE_INTERVAL_12HOUR = '12h'
KLINE_INTERVAL_1DAY = '1d'
KLINE_INTERVAL_3DAY = '3d'
KLINE_INTERVAL_1WEEK = '1w'
KLINE_INTERVAL_1MONTH = '1M'

SIDE_BUY = 'BUY'
SIDE_SELL = 'SELL'
```

(continues on next page)

(continued from previous page)

```
ORDER_TYPE_LIMIT = 'LIMIT'
ORDER_TYPE_MARKET = 'MARKET'
ORDER_TYPE_STOP_LOSS = 'STOP_LOSS'
ORDER_TYPE_STOP_LOSS_LIMIT = 'STOP_LOSS_LIMIT'
ORDER_TYPE_TAKE_PROFIT = 'TAKE_PROFIT'
ORDER_TYPE_TAKE_PROFIT_LIMIT = 'TAKE_PROFIT_LIMIT'
ORDER_TYPE_LIMIT_MAKER = 'LIMIT_MAKER'

TIME_IN_FORCE_GTC = 'GTC'
TIME_IN_FORCE_IOC = 'IOC'
TIME_IN_FORCE_FOK = 'FOK'

ORDER_RESP_TYPE_ACK = 'ACK'
ORDER_RESP_TYPE_RESULT = 'RESULT'
ORDER_RESP_TYPE_FULL = 'FULL'

# For accessing the data returned by Client.aggregate_trades().
AGG_ID = 'a'
AGG_PRICE = 'p'
AGG_QUANTITY = 'q'
AGG_FIRST_TRADE_ID = 'f'
AGG_LAST_TRADE_ID = 'l'
AGG_TIME = 'T'
AGG_BUYER_MAKES = 'm'
AGG_BEST_MATCH = 'M'
```

For Websocket Depth these are found on *binance.websockets.BinanceSocketManager*

```
WEBSOCKET_DEPTH_5 = '5'
WEBSOCKET_DEPTH_10 = '10'
WEBSOCKET_DEPTH_20 = '20'
```

To use in your code reference either `binance.client.Client` or `binance.websockets.BinanceSocketManager`

```
from binance.client import Client
from binance.websockets import BinanceSocketManager

side = Client.SIDE_BUY
```

### 5.1.3 General Endpoints

#### Ping the server

```
client.ping()
```

#### Get the server time

```
time_res = client.get_server_time()
```

## Get system status

```
status = client.get_system_status()
```

### Returns

```
{
    "status": 0,           # 0: normal system maintenance
    "msg": "normal"      # normal or System maintenance.
}
```

## Get Exchange Info

```
info = client.get_exchange_info()
```

## Get Symbol Info

Get the exchange info for a particular symbol

```
info = client.get_symbol_info('BNBBTC')
```

## Get All Coins Info

Get information of coins (available for deposit and withdraw) for user

```
info = client.get_all_tickers()
```

## Get Get Daily Account Snapshot

Get daily account snapshot of specific type. Valid types: SPOT/MARGIN/FUTURES.

```
info = client.get_account_snapshot(type='SPOT')
```

## Get Current Products

This call is deprecated, use the above Exchange Info call

```
products = client.get_products()
```

## 5.1.4 Market Data Endpoints

### Get Market Depth

```
depth = client.get_order_book(symbol='BNBBTC')
```

## Get Recent Trades

```
trades = client.get_recent_trades(symbol='BNBBTC')
```

## Get Historical Trades

```
trades = client.get_historical_trades(symbol='BNBBTC')
```

## Get Aggregate Trades

```
trades = client.get_aggregate_trades(symbol='BNBBTC')
```

## Aggregate Trade Iterator

Iterate over aggregate trades for a symbol from a given date or a given order id.

```
agg_trades = client.aggregate_trade_iter(symbol='ETHBTC', start_str='30 minutes ago_
↳UTC')

# iterate over the trade iterator
for trade in agg_trades:
    print(trade)
    # do something with the trade data

# convert the iterator to a list
# note: generators can only be iterated over once so we need to call it again
agg_trades = client.aggregate_trade_iter(symbol='ETHBTC', '30 minutes ago UTC')
agg_trade_list = list(agg_trades)

# example using last_id value
agg_trades = client.aggregate_trade_iter(symbol='ETHBTC', last_id=23380478)
agg_trade_list = list(agg_trades)
```

## Get Kline/Candlesticks

```
candles = client.get_klines(symbol='BNBBTC', interval=Client.KLINE_INTERVAL_30MINUTE)
```

## Get Historical Kline/Candlesticks

Fetch klines for any date range and interval

```
# fetch 1 minute klines for the last day up until now
klines = client.get_historical_klines("BNBBTC", Client.KLINE_INTERVAL_1MINUTE, "1 day_
↳ago UTC")

# fetch 30 minute klines for the last month of 2017
klines = client.get_historical_klines("ETHBTC", Client.KLINE_INTERVAL_30MINUTE, "1_
↳Dec, 2017", "1 Jan, 2018")
```

(continues on next page)

(continued from previous page)

```
# fetch weekly klines since it listed
klines = client.get_historical_klines("NEOBTC", Client.KLINE_INTERVAL_1WEEK, "1 Jan, 2017")
```

## Get Historical Kline/Candlesticks using a generator

Fetch klines using a generator

```
for kline in client.get_historical_klines_generator("BNBBTC", Client.KLINE_INTERVAL_1MINUTE, "1 day ago UTC"):
    print(kline)
    # do something with the kline
```

## Get average price for a symbol

```
avg_price = client.get_avg_price(symbol='BNBBTC')
```

## Get 24hr Ticker

```
tickers = client.get_ticker()
```

## Get All Prices

Get last price for all markets.

```
prices = client.get_all_tickers()
```

## Get Orderbook Tickers

Get first bid and ask entry in the order book for all markets.

```
tickers = client.get_orderbook_tickers()
```

## 5.1.5 Account Endpoints

### Orders

#### Order Validation

Binance has a number of rules around symbol pair orders with validation on minimum price, quantity and total order value.

Read more about their specifics in the [Filters](#) section of the official API.

It can be helpful to format the output using the following snippet

```
amount = 0.000234234
precision = 5
amt_str = "{:0.0{}}f".format(amount, precision)
```

### Fetch all orders

```
orders = client.get_all_orders(symbol='BNBBTC', limit=10)
```

### Place an order

#### Place an order

Use the `create_order` function to have full control over creating an order

```
from binance.enums import *
order = client.create_order(
    symbol='BNBBTC',
    side=SIDE_BUY,
    type=ORDER_TYPE_LIMIT,
    timeInForce=TIME_IN_FORCE_GTC,
    quantity=100,
    price='0.00001')
```

#### Place a limit order

Use the helper functions to easily place a limit buy or sell order

```
order = client.order_limit_buy(
    symbol='BNBBTC',
    quantity=100,
    price='0.00001')

order = client.order_limit_sell(
    symbol='BNBBTC',
    quantity=100,
    price='0.00001')
```

#### Place a market order

Use the helper functions to easily place a market buy or sell order

```
order = client.order_market_buy(
    symbol='BNBBTC',
    quantity=100)

order = client.order_market_sell(
    symbol='BNBBTC',
    quantity=100)
```

#### Place an OCO order

Use the `create_oco_order` function to have full control over creating an OCO order

```
from binance.enums import *
order = client.create_oco_order(
    symbol='BNBBTC',
    side=SIDE_SELL,
    stopLimitTimeInForce=TIME_IN_FORCE_GTC,
    quantity=100,
    stopPrice='0.00001',
    price='0.00002')
```

## Place a test order

Creates and validates a new order but does not send it into the exchange.

```
from binance.enums import *
order = client.create_test_order(
    symbol='BNBBTC',
    side=SIDE_BUY,
    type=ORDER_TYPE_LIMIT,
    timeInForce=TIME_IN_FORCE_GTC,
    quantity=100,
    price='0.00001')
```

## Check order status

```
order = client.get_order(
    symbol='BNBBTC',
    orderId='orderId')
```

## Cancel an order

```
result = client.cancel_order(
    symbol='BNBBTC',
    orderId='orderId')
```

## Get all open orders

```
orders = client.get_open_orders(symbol='BNBBTC')
```

## Get all orders

```
orders = client.get_all_orders(symbol='BNBBTC')
```

## Account

### Get account info

```
info = client.get_account()
```

### Get asset balance

```
balance = client.get_asset_balance(asset='BTC')
```

### Get account status

```
status = client.get_account_status()
```

### Get account API trading status

```
status = client.get_account_api_trading_status()
```

### Get trades

```
trades = client.get_my_trades(symbol='BNBBTC')
```

### Get trade fees

```
# get fees for all symbols  
fees = client.get_trade_fee()  
  
# get fee for one symbol  
fees = client.get_trade_fee(symbol='BNBBTC')
```

### Get asset details

```
details = client.get_asset_details()
```

### Get dust log

```
log = client.get_dust_log()
```

### Transfer dust

```
transfer = client.transfer_dust(asset='BNZ')
```

### Get Asset Dividend History

```
history = client.get_asset_dividend_history()
```

### Disable Fast Withdraw Switch

```
client.disable_fast_withdraw_switch()
```

### Enable Fast Withdraw Switch

```
client.enable_fast_withdraw_switch()
```

## 5.1.6 Sub Account Endpoints

### Get Sub Account list

```
accounts = client.get_sub_account_list()
```

### Get Sub Account Transfer History

```
history = client.get_sub_account_transfer_history(email='blah@gmail.com')
```

### Create Sub Account Transfer

```
transfer = client.create_sub_account_transfer(  
    fromEmail='from@gmail.com',  
    toEmail='to@gmail.com',  
    asset='BNB',  
    amount='100'  
)
```

### Get Sub Account Assets

```
assets = client.get_sub_account_assets(email='blah@gmail.com')
```

## 5.1.7 Margin Trading Endpoints

---

### Note: Cross-margin vs isolated margin trading

Binance offers both *cross-margin* trading (where all margin is in one account) and *isolated margin* trading (where each pair is a separate margin account). Make sure you are interacting with the right one.

Some of the API endpoints apply to the cross-margin or isolated margin accounts only. Other endpoints, such as the trade execution endpoints, are used for the cross-margin account trades by default, but you can use your isolated margin accounts by using the `isIsolated` or `isolatedSymbol` parameters. See the documentation below.

---

## Market Data

### Get cross-margin asset info

```
info = client.get_margin_asset(asset='BNB')
```

### Get cross-margin symbol info

```
info = client.get_margin_symbol(symbol='BTCUSDT')
```

### Get isolated margin symbol info

```
info = client.get_isolated_margin_symbol(symbol='BTCUSDT')
```

### Get all isolated margin symbols

```
info = client.get_all_isolated_margin_symbols()
```

### Get margin price index

```
info = client.get_margin_price_index(symbol='BTCUSDT')
```

## Orders

### Cross-margin vs isolated margin orders

By default, these trade execution endpoints will create an order using the *cross-margin* account.

To use the *isolated margin* account for the `symbol` you have specified, simply add the `isIsolated='TRUE'` parameter to the API calls below in this 'Orders' section.

### Order Validation

Binance has a number of rules around symbol pair orders with validation on minimum price, quantity and total order value.

Read more about their specifics in the [Filters](#) section of the official API.

It can be helpful to format the output using the following snippet

```
amount = 0.000234234
precision = 5
amt_str = "{:0.0{}}f".format(amount, precision)
```

### Fetch all margin\_orders

```
orders = client.get_all_margin_orders(symbol='BNBBTC', limit=10)
```

### Place a margin order

Use the `create_margin_order` function to have full control over creating an order

```
from binance.enums import *
order = client.create_margin_order(
    symbol='BNBBTC',
    side=SIDE_BUY,
    type=ORDER_TYPE_LIMIT,
    timeInForce=TIME_IN_FORCE_GTC,
    quantity=100,
    price='0.00001')
```

### Check order status

```
order = client.get_margin_order(
    symbol='BNBBTC',
    orderId='orderId')
```

### Cancel a margin order

```
result = client.cancel_margin_order(
    symbol='BNBBTC',
    orderId='orderId')
```

### Get all open margin orders

```
orders = client.get_open_margin_orders(symbol='BNBBTC')
```

For isolated margin, add the `isIsolated='TRUE'` parameter.

### Get all margin orders

```
orders = client.get_all_margin_orders(symbol='BNBBTC')
```

For isolated margin, add the `isIsolated='TRUE'` parameter.

## Account

### Get cross-margin account info

```
info = client.get_margin_account()
```

### Create isolated margin account

```
account = client.create_isolated_margin_account(base='BTC', quote='ETH')
```

### Get isolated margin account info

```
info = client.get_isolated_margin_account()
```

### Transfer spot to cross-margin account

```
transaction = client.transfer_spot_to_margin(asset='BTC', amount='1.1')
```

### Transfer cross-margin account to spot

```
transaction = client.transfer_margin_to_spot(asset='BTC', amount='1.1')
```

### Transfer spot to isolated margin account

```
transaction = client.transfer_spot_to_isolated_margin(asset='BTC',  
                                                    symbol='ETHBTC', amount='1.1')
```

### Transfer isolated margin account to spot

```
transaction = client.transfer_isolated_margin_to_spot(asset='BTC',  
                                                    symbol='ETHBTC', amount='1.1')
```

### Get max transfer amount

```
details = client.get_max_margin_transfer(asset='BTC')
```

This max transfer is for the cross-margin account by default. For isolated margin records, add the `isolatedSymbol=symbol_name` parameter.

## Trades

### Get all margin trades

```
trades = client.get_margin_trades(symbol='BNBBTC')
```

For isolated margin trades, add the `isIsolated='TRUE'` parameter.

## Loans

### Create loan

```
transaction = client.create_margin_loan(asset='BTC', amount='1.1')
```

This for the cross-margin account by default. For isolated margin, add the `isIsolated='TRUE'` and the `symbol=symbol_name` parameters.

### Repay loan

```
transaction = client.repay_margin_loan(asset='BTC', amount='1.1')
```

This for the cross-margin account by default. For isolated margin, add the `isIsolated='TRUE'` and the `symbol=symbol_name` parameters.

### Get loan details

```
details = client.get_margin_loan_details(asset='BTC', txId='100001')
```

This for the cross-margin account by default. For isolated margin records, add the `isolatedSymbol=symbol_name` parameter.

### Get repay details

```
details = client.get_margin_repay_details(asset='BTC', txId='100001')
```

This for the cross-margin account by default. For isolated margin records, add the `isolatedSymbol=symbol_name` parameter.

### Get max loan amount

```
details = client.get_max_margin_loan(asset='BTC')
```

The max loan is for the cross-margin account by default. For isolated margin records, add the `isolatedSymbol=symbol_name` parameter.

## 5.1.8 Websockets

Sockets are handled through a Socket Manager `BinanceSocketManager`.

Multiple socket connections can be made through the manager.

Only one instance of each socket type will be created, i.e. only one BNBBTC Depth socket can be created and there can be both a BNBBTC Depth and a BNBBTC Trade socket open at once.

When creating socket connections a callback function is passed which receives the messages.

Messages are received as dictionary objects relating to the message formats defined in the [Binance WebSocket API documentation](#).

Websockets are setup to reconnect with a maximum of 5 retries.

### Websocket Usage

Create the manager like so, passing the API client.

```
from binance.websockets import BinanceSocketManager
bm = BinanceSocketManager(client)
# start any sockets here, i.e a trade socket
conn_key = bm.start_trade_socket('BNBBTC', process_message)
# then start the socket manager
bm.start()
```

A callback to process messages would take the format

```
def process_message(msg):
    print("message type: {}".format(msg['e']))
    print(msg)
    # do something
```

Set a custom timeout for the websocket connection

```
# set a timeout of 60 seconds
bm = BinanceSocketManager(client, user_timeout=60)
```

### Websocket Errors

If the websocket is disconnected and is unable to reconnect a message is sent to the callback to indicate this. The format is

```
{
    'e': 'error',
    'm': 'Max reconnect retries reached'
}

# check for it like so
def process_message(msg):
    if msg['e'] == 'error':
        # close and restart the socket
    else:
        # process message normally
```

## Multiplex Socket

Create a socket combining multiple streams.

These streams can include the depth, kline, ticker and trade streams but not the user stream which requires extra authentication.

Symbols in socket name must be lowercase i.e `bnbtc@aggTrade`, `neobtc@ticker`

See the [Binance Websocket Streams API documentation](#) for details on socket names.

```
def process_m_message(msg):
    print("stream: {} data: {}".format(msg['stream'], msg['data']))

# pass a list of stream names
conn_key = bm.start_multiplex_socket(['bnbtc@aggTrade', 'neobtc@ticker'], process_m_
    ↪message)
```

## Depth Socket

Depth sockets have an optional depth parameter to receive partial book rather than a diff response. By default this the diff response is returned. Valid depth values are 5, 10 and 20 and defined as enums.

```
# depth diff response
diff_key = bm.start_depth_socket('BNBBTC', process_message)

# partial book response
partial_key = bm.start_depth_socket('BNBBTC', process_message, ↪
    ↪depth=BinanceSocketManager.WEBSOCKET_DEPTH_5)
```

## Kline Socket

Kline sockets have an optional interval parameter. By default this is set to 1 minute. Valid interval values are defined as enums.

```
from binance.enums import *
conn_key = bm.start_kline_socket('BNBBTC', process_message, interval=KLINE_INTERVAL_
    ↪30MINUTE)
```

## Aggregated Trade Socket

```
conn_key = bm.start_agtrade_socket('BNBBTC', process_message)
```

## Trade Socket

```
conn_key = bm.start_trade_socket('BNBBTC', process_message)
```

## Symbol Ticker Socket

```
conn_key = bm.start_symbol_ticker_socket('BNBBTC', process_message)
```

## Ticker Socket

```
conn_key = bm.start_ticker_socket(process_message)
```

## Mini Ticker Socket

```
# by default updates every second
conn_key = bm.start_miniticker_socket(process_message)

# this socket can take an update interval parameter
# set as 5000 to receive updates every 5 seconds
conn_key = bm.start_miniticker_socket(process_message, 5000)
```

## User Socket

This watches for 3 different user events

- Account Update Event
- Order Update Event
- Trade Update Event

The Manager handles keeping the socket alive.

There are separate sockets for Spot, Cross-margin and separate Isolated margin accounts.

## Spot trading

```
bm.start_user_socket(process_message)
```

## Cross-margin

```
bm.start_margin_socket(process_message)
```

## Isolated margin

```
bm.start_isolated_margin_socket(symbol, process_message)
```

## Close a Socket

To close an individual socket call the `stop_socket` function. This takes a `conn_key` parameter which is returned when starting the socket.

```
bm.stop_socket(conn_key)
```

To stop all sockets and end the manager call `close` after doing this a `start` call would be required to connect any new sockets.

```
bm.close()
```

## Close and exit program

Websockets utilise a reactor loop from the Twisted library. Using the `close` method above will close the websocket connections but it won't stop the reactor loop so your code may not exit when you expect.

If you do want to exit then use the `stop` method from reactor like below.

```
from twisted.internet import reactor

# program code here

# when you need to exit
reactor.stop()
```

## 5.1.9 Depth Cache

To follow the depth cache updates for a symbol use the `DepthCacheManager`. For vanilla options use the `Options-DepthCacheManager`.

Create the manager like so, passing the api client, symbol and an optional callback function.

```
from binance.depthcache import DepthCacheManager
dcm = DepthCacheManager(client, 'BNBBTC', callback=process_depth)
```

The callback function receives the current `DepthCache` object which allows access to a pre-sorted list of bids or asks able to be filtered as required.

Access the symbol value from the `depth_cache` object in case you have multiple caches using the same callback.

By default the depth cache will fetch the order book via REST request every 30 minutes. This duration can be changed by using the `refresh_interval` parameter. To disable the refresh pass 0 or None. The socket connection will stay open receiving updates to be replayed once the full order book is received.

## Share a Socket Manager

Here `dcm1` and `dcm2` share the same instance of `BinanceSocketManager`

```
from binance.websockets import BinanceSocketManager
from binance.depthcache import DepthCacheManager
bm = BinanceSocketManager(client)
dcm1 = DepthCacheManager(client, 'BNBBTC', callback=process_depth1, bm=bm)
dcm2 = DepthCacheManager(client, 'ETHBTC', callback=process_depth2, bm=bm)
```

Because they both share the same `BinanceSocketManager` calling `close` can close both message streams.

```
# close just dcml stream
dcml.close()

# close the underlying socket manager as well
dcml.close(close_socket=True)
```

## Websocket Errors

If the underlying websocket is disconnected and is unable to reconnect `None` is returned for the `depth_cache` parameter.

## Examples

```
# 1 hour interval refresh
dcm = DepthCacheManager(client, 'BNBBTC', callback=process_depth, refresh_
→interval=60*60)

# disable refreshing
dcm = DepthCacheManager(client, 'BNBBTC', callback=process_depth, refresh_interval=0)
```

```
def process_depth(depth_cache):
    if depth_cache is not None:
        print("symbol {}".format(depth_cache.symbol))
        print("top 5 bids")
        print(depth_cache.get_bids()[:5])
        print("top 5 asks")
        print(depth_cache.get_asks()[:5])
        print("last update time {}".format(depth_cache.update_time))
    else:
        # depth cache had an error and needs to be restarted
```

At any time the current `DepthCache` object can be retrieved from the `DepthCacheManager`

```
depth_cache = dcm.get_depth_cache()
if depth_cache is not None:
    print("symbol {}".format(depth_cache.symbol))
    print("top 5 bids")
    print(depth_cache.get_bids()[:5])
    print("top 5 asks")
    print(depth_cache.get_asks()[:5])
    print("last update time {}".format(depth_cache.update_time))
else:
    # depth cache had an error and needs to be restarted
```

To stop the `DepthCacheManager` from returning messages use the `close` method. This will close the internal websocket and this instance of the `DepthCacheManager` will not be able to be used again.

```
dcm.close()
```

## 5.1.10 Withdraw Endpoints

## Place a withdrawal

Make sure you enable Withdrawal permissions for your API Key to use this call.

You must have withdrawn to the address through the website and approved the withdrawal via email before you can withdraw using the API.

Raises a `BinanceWithdrawException` if the withdraw fails.

```
from binance.exceptions import BinanceAPIException, BinanceWithdrawException
try:
    # name parameter will be set to the asset value by the client if not passed
    result = client.withdraw(
        asset='ETH',
        address='<eth_address>',
        amount=100)
except BinanceAPIException as e:
    print(e)
except BinanceWithdrawException as e:
    print(e)
else:
    print("Success")

# passing a name parameter
result = client.withdraw(
    asset='ETH',
    address='<eth_address>',
    amount=100,
    name='Withdraw')

# if the coin requires a extra tag or name such as XRP or XMR then pass an
↪ `addressTag` parameter.
result = client.withdraw(
    asset='XRP',
    address='<xrp_address>',
    addressTag='<xrp_address_tag>',
    amount=10000)
```

## Fetch deposit history

```
deposits = client.get_deposit_history()
btc_deposits = client.get_deposit_history(asset='BTC')
```

## Fetch withdraw history

```
withdraws = client.get_withdraw_history()
btc_withdraws = client.get_withdraw_history(asset='BTC')
```

## Get deposit address

```
address = client.get_deposit_address(asset='BTC')
```

### 5.1.11 Helper Functions

`binance.helpers`

alias of `binance.helpers`

### 5.1.12 Exceptions

#### **BinanceRequestException**

Raised if a non JSON response is returned

#### **BinanceAPIException**

On an API call error a `binance.exceptions.BinanceAPIException` will be raised.

The exception provides access to the

- `status_code` - response status code
- `response` - response object
- `code` - Binance error code
- `message` - Binance error message
- `request` - request object if available

```
try:
    client.get_all_orders()
except BinanceAPIException as e:
    print e.status_code
    print e.message
```

#### **BinanceWithdrawException**

Raised if the withdraw fails.

### 5.1.13 FAQ

*Q: Why do I get “Timestamp for this request is not valid”*

*A:* This occurs in 2 different cases.

The timestamp sent is outside of the `serverTime - recvWindow` value The timestamp sent is more than 1000ms ahead of the server time

Check that your system time is in sync. See [this issue](#) for some sample code to check the difference between your local time and the Binance server time.

*Q: Why do I get “Signature for this request is not valid”*

*A1:* One of your parameters may not be in the correct format.

Check `recvWindow` is an integer and not a string.

*A2:* You may need to regenerate your API Key and Secret

*A3:* You may be attempting to access the API from a Chinese IP address, these are now restricted by Binance.

*Q: Twisted won't install using pip on Windows*

*A:* If you see errors building Twisted indication Microsoft Visual C++ is required you may need to install the Visual C++ Build Tools refer to the [Python Wiki on Windows Compilers](#) for your relevant version.

## 5.1.14 Changelog

### v0.7.5.dev

**Changed** - Stock json lib to ujson (<https://github.com/sammchardy/python-binance/pull/383>)

### v0.7.5 - 2020-02-06

#### Added

- Futures REST endpoints
- Lending REST endpoints
- OCO Orders function *create\_oco\_order*, *order\_oco\_buy*, *order\_oco\_sell*
- Average Price function *get\_avg\_price*
- Support for other domains (.us, .jp, etc)

#### Updated

- dependencies

#### Fixed

- websocket keepalive callback not found

### v0.7.4 - 2019-09-22

#### Added

- symbol book ticker websocket streams
- margin websocket stream

#### Updated

- can call Client without any params
- make response a property of the Client class so you can access response properties after a request

#### Fixed

- issue with None value params causing errors

### v0.7.3 - 2019-08-12

#### Added

- sub account endpoints
- dust transfer endpoint
- asset dividend history endpoint

**Removed**

- deprecated withdraw fee endpoint

**v0.7.2 - 2019-08-01**

**Added**

- margin trading endpoints

**Fixed**

- depth cache clearing bug

**v0.7.1 - 2019-01-23**

**Added**

- limit param to DepthCacheManager
- limit param to get\_historical\_klines
- update\_time to DepthCache class

**Updated**

- test coverage

**Fixed**

- super init in Websocket class
- removal of request params from signature
- empty set issue in aggregate\_trade\_iter

**v0.7.0 - 2018-08-08**

**Added**

- get\_asset\_details endpoint
- get\_dust\_log endpoint
- get\_trade\_fee endpoint
- ability for multiple DepthCacheManagers to share a BinanceSocketManager
- get\_historical\_klines\_generator function
- custom socket timeout param for BinanceSocketManager

**Updated**

- general dependency version
- removed support for python3.3

**Fixed**

- add a super init on BinanceClientProtocol

#### v0.6.9 - 2018-04-27

##### Added

- timestamp in milliseconds to *get\_historical\_klines* function
- timestamp in milliseconds to *aggregate\_trade\_iter* function

##### Fixed

- Don't close user stream listen key on socket close

#### v0.6.8 - 2018-03-29

##### Added

- *get\_withdraw\_fee* function

##### Fixed

- Remove unused LISTENKEY\_NOT\_EXISTS
- Optimise the historical klines function to reduce requests
- Issue with end\_time in aggregate trade iterator

#### v0.6.7 - 2018-03-14

##### Fixed

- Issue with *get\_historical\_klines* when response had exactly 500 results
- Changed BinanceResponseException to BinanceRequestException
- Set default code value in BinanceApiException properly

#### v0.6.6 - 2018-02-17

##### Fixed

- User stream websocket keep alive strategy updated

#### v0.6.5 - 2018-02-13

##### Fixed

- *get\_historical\_klines* response for month interval

#### v0.6.4 - 2018-02-09

##### Added

- system status endpoint *get\_system\_status*

### v0.6.3 - 2018-01-29

#### Added

- mini ticker socket function *start\_miniticker\_socket*
- aggregate trade iterator *aggregate\_trade\_iter*

#### Fixes

- clean up *interval\_to\_milliseconds* logic
- general doc and file cleanups

### v0.6.2 - 2018-01-12

#### Fixes

- fixed handling Binance errors that aren't JSON objects

### v0.6.1 - 2018-01-10

#### Fixes

- added missing dateparser dependency to setup.py
- documentation fixes

### v0.6.0 - 2018-01-09

New version because why not.

#### Added

- *get\_historical\_klines* function to fetch klines for any date range
- ability to override requests parameters globally
- error on websocket disconnect
- example related to blog post

#### Fixes

- documentation fixes

### v0.5.17 - 2018-01-08

#### Added

- check for name parameter in *withdraw*, set to asset parameter if not passed

#### Update

- Windows install error documentation

#### Removed

- reference to *disable\_validation* in documentation

### v0.5.16 - 2018-01-06

#### Added

- addressTag documentation to withdraw function
- documentation about requests proxy environment variables

#### Update

- FAQ for signature error with solution to regenerate API key
- change create\_order to create\_test\_order in example

#### Fixed

- reference to BinanceAPIException in documentation

### v0.5.15 - 2018-01-03

#### Fixed

- removed all references to WEBSOCKET\_DEPTH\_1 enum

### v0.5.14 - 2018-01-02

#### Added

- Wait for depth cache socket to start
- check for sequential depth cache messages

#### Updated

- documentation around depth websocket and diff and partial responses

#### Removed

- Removed unused WEBSOCKET\_DEPTH\_1 enum
- removed unused libraries and imports

### v0.5.13 - 2018-01-01

#### Fixed

- Signature invalid error

### v0.5.12 - 2017-12-29

#### Added

- get\_asset\_balance helper function to fetch an individual asset's balance

#### Fixed

- added timeout to requests call to prevent hanging
- changed variable type to str for price parameter when creating an order
- documentation fixes

#### v0.5.11 - 2017-12-28

##### Added

- refresh interval parameter to depth cache to keep it fresh, set default at 30 minutes

##### Fixed

- watch depth cache socket before fetching order book to replay any messages

#### v0.5.10 - 2017-12-28

##### Updated

- updated dependencies certifi and cryptography to help resolve signature error

#### v0.5.9 - 2017-12-26

##### Fixed

- fixed websocket reconnecting, was no distinction between manual close or network error

#### v0.5.8 - 2017-12-25

##### Changed

- change symbol parameter to optional for get\_open\_orders function
- added listenKey parameter to stream\_close function

##### Added

- get\_account\_status function that was missed

#### v0.5.7 - 2017-12-24

##### Changed

- change depth cache callback parameter to optional

##### Added

- note about stopping Twisted reactor loop to exit program

#### v0.5.6 - 2017-12-20

##### Added

- get\_symbol\_info function to simplify getting info about a particular symbol

#### v0.5.5 - 2017-12-19

##### Changed

- Increased default limit for order book on depth cache from 10 to 500

#### v0.5.4 - 2017-12-14

##### Added

- symbol property made public on DepthCache class

##### Changed

- Enums now also accessible from `binance.client.Client` and `binance.websockets.BinanceSocketManager`

#### v0.5.3 - 2017-12-09

##### Changed

- User stream refresh timeout from 50 minutes to 30 minutes
- User stream socket listen key change check simplified

#### v0.5.2 - 2017-12-08

##### Added

- `start_multiplex_socket` function to `BinanceSocketManager` to create multiplexed streams

#### v0.5.1 - 2017-12-06

##### Added

- Close method for `DepthCacheManager`

##### Fixes

- Fixed modifying array error message when closing the `BinanceSocketManager`

#### v0.5.0 - 2017-12-05

Updating to match new API documentation

##### Added

- Recent trades endpoint
- Historical trades endpoint
- Order response type option
- Check for invalid user stream listen key in socket to keep connected

##### Fixes

- Fixed exchange info endpoint as it was renamed slightly

#### v0.4.3 - 2017-12-04

##### Fixes

- Fixed stopping sockets where they were reconnecting
- Fixed websockets unable to be restarted after close

- Exception in parsing non-JSON websocket message

#### **v0.4.2 - 2017-11-30**

##### **Removed**

- Removed websocket update time as Oms option is not available

#### **v0.4.1 - 2017-11-24**

##### **Added**

- Reconnecting websockets, automatic retry on disconnect

#### **v0.4.0 - 2017-11-19**

##### **Added**

- Get deposit address endpoint
- Upgraded withdraw endpoints to v3
- New exchange info endpoint with rate limits and full symbol info

##### **Removed**

- Order validation to return at a later date

#### **v0.3.8 - 2017-11-17**

##### **Fixes**

- Fix order validation for market orders
- WEBSOCKET\_DEPTH\_20 value, 20 instead of 5
- General tidy up

#### **v0.3.7 - 2017-11-16**

##### **Fixes**

- Fix multiple depth caches sharing a cache by initialising bid and ask objects each time

#### **v0.3.6 - 2017-11-15**

##### **Fixes**

- check if Reactor is already running

### **v0.3.5 - 2017-11-06**

#### **Added**

- support for BNB market

#### **Fixes**

- fixed error if new market type is created that we don't know about

### **v0.3.4 - 2017-10-31**

#### **Added**

- depth parameter to depth socket
- interval parameter to kline socket
- update time parameter for compatible sockets
- new enums for socket depth and update time values
- better websocket documentation

#### **Changed**

- Depth Cache Manager uses 0ms socket update time
- connection key returned when creating socket, this key is then used to stop it

#### **Fixes**

- General fixes

### **v0.3.3 - 2017-10-31**

#### **Fixes**

- Fixes for broken tests

### **v0.3.2 - 2017-10-30**

#### **Added**

- More test coverage of requests

#### **Fixes**

- Order quantity validation fix

### **v0.3.1 - 2017-10-29**

#### **Added**

- Withdraw exception handler with translation of obscure error

#### **Fixes**

- Validation fixes

### **v0.3.0 - 2017-10-29**

#### **Added**

- Withdraw endpoints
- Order helper functions

### **v0.2.0 - 2017-10-27**

#### **Added**

- Symbol Depth Cache

### **v0.1.6 - 2017-10-25**

#### **Changes**

- Upgrade to v3 signed endpoints
- Update function documentation

### **v0.1.5 - 2017-09-12**

#### **Changes**

- Added get\_all\_tickers call
- Added get\_orderbook\_tickers call
- Added some FAQs

#### **Fixes**

- Fix error in enum value

### **v0.1.4 - 2017-09-06**

#### **Changes**

- Added parameter to disable client side order validation

### **v0.1.3 - 2017-08-26**

#### **Changes**

- Updated documentation

#### **Fixes**

- Small bugfix

### v0.1.2 - 2017-08-25

#### Added

- Travis.CI and Coveralls support

#### Changes

- Validation for pairs using public endpoint

### v0.1.1 - 2017-08-17

#### Added

- Validation for HSR/BTC pair

### v0.1.0 - 2017-08-16

Websocket release

#### Added

- Websocket manager
- Order parameter validation
- Order and Symbol enums
- API Endpoints for Data Streams

### v0.0.2 - 2017-08-14

Initial version

#### Added

- General, Market Data and Account endpoints

## 5.1.15 Binance API

### client module

```
class binance.client.Client(api_key=None, api_secret=None, requests_params=None,

```

```
__init__(api_key=None, api_secret=None, requests_params=None, tld='com', testnet=False)  
Binance API Client constructor
```

#### Parameters

- **api\_key** (*str.*) – Api Key
- **api\_secret** (*str.*) – Api Secret
- **requests\_params** (*dict.*) – optional - Dictionary of requests params to use for all calls
- **testnet** (*bool*) – Use testnet environment - only available for vanilla options at the moment

```
aggregate_trade_iter(symbol, start_str=None, last_id=None)
```

Iterate over aggregate trade data from (start\_time or last\_id) to the end of the history so far.

If start\_time is specified, start with the first trade after start\_time. Meant to initialise a local cache of trade data.

If last\_id is specified, start with the trade after it. This is meant for updating a pre-existing local trade data cache.

Only allows start\_str or last\_id—not both. Not guaranteed to work right if you’re running more than one of these simultaneously. You will probably hit your rate limit.

See dateparser docs for valid start and end string formats <http://dateparser.readthedocs.io/en/latest/>

If using offset strings for dates add “UTC” to date string e.g. “now UTC”, “11 hours ago UTC”

#### Parameters

- **symbol** (*str*) – Symbol string e.g. ETHBTC
- **start\_str** – Start date string in UTC format or timestamp in milliseconds. The iterator will

return the first trade occurring later than this time. :type start\_str: str lint :param last\_id: aggregate trade ID of the last known aggregate trade. Not a regular trade ID. See <https://github.com/binance/binance-spot-api-docs/blob/master/rest-api.md#compressedaggregate-trades-list>.

**Returns** an iterator of JSON objects, one per trade. The format of each object is identical to Client.aggregate\_trades().

```
cancel_margin_order(**params)
```

Cancel an active order for margin account.

Either orderId or origClientId must be sent.

<https://binance-docs.github.io/apidocs/spot/en/#margin-account-cancel-order-trade>

**Parameters**

- **symbol** (*str*) – required
- **isIsolated** (*str*) – set to ‘TRUE’ for isolated margin (default ‘FALSE’)
- **orderId** (*str*) –
- **origClientId** (*str*) –
- **newClientId** (*str*) – Used to uniquely identify this cancel. Automatically generated by default.
- **recvWindow** (*int*) – the number of milliseconds the request is valid for

**Returns**

API response

```
{ "symbol": "LTCBTC", "orderId": 28, "origClientId": "myOrder1", "clientOrderId": "cancelMyOrder1", "transactTime": 1507725176595, "price": "1.00000000", "origQty": "10.00000000", "executedQty": "8.00000000", "cumulativeQuoteQty": "8.00000000", "status": "CANCELED", "timeInForce": "GTC", "type": "LIMIT", "side": "SELL"
}
```

**Raises** BinanceRequestException, BinanceAPIException

**cancel\_order** (\*\**params*)

Cancel an active order. Either orderId or origClientId must be sent.

<https://github.com/binance/binance-spot-api-docs/blob/master/rest-api.md#cancel-order-trade>

**Parameters**

- **symbol** (*str*) – required
- **orderId** (*int*) – The unique order id
- **origClientId** (*str*) – optional
- **newClientId** (*str*) – Used to uniquely identify this cancel. Automatically generated by default.
- **recvWindow** (*int*) – the number of milliseconds the request is valid for

**Returns** API response

```
{
  "symbol": "LTCBTC",
  "origClientId": "myOrder1",
  "orderId": 1,
  "clientOrderId": "cancelMyOrder1"
}
```

**Raises** BinanceRequestException, BinanceAPIException

**change\_fixed\_activity\_to\_daily\_position** (\*\**params*)

Change Fixed/Activity Position to Daily Position

<https://binance-docs.github.io/apidocs/spot/en/#change-fixed-activity-position-to-daily-position-user-data>

**create\_isolated\_margin\_account** (\*\*params)

Create isolated margin account for symbol

<https://binance-docs.github.io/apidocs/spot/en/#create-isolated-margin-account-margin>

**Parameters**

- **base** (*str*) – Base asset of symbol
- **quote** (*str*) – Quote asset of symbol

```
pair_details = client.create_isolated_margin_account(base='USDT', quote='BTC')
```

**Returns** API response

```
{
  "success": true,
  "symbol": "BTCUSDT"
}
```

**Raises** BinanceRequestException, BinanceAPIException

**create\_margin\_loan** (\*\*params)

Apply for a loan in cross-margin or isolated-margin account.

<https://binance-docs.github.io/apidocs/spot/en/#margin-account-borrow-margin>

**Parameters**

- **asset** (*str*) – name of the asset
- **amount** (*str*) – amount to transfer
- **isIsolated** (*str*) – set to 'TRUE' for isolated margin (default 'FALSE')
- **symbol** (*str*) – Isolated margin symbol (default blank for cross-margin)
- **recvWindow** (*int*) – the number of milliseconds the request is valid for

```
transaction = client.margin_create_loan(asset='BTC', amount='1.1')
transaction = client.margin_create_loan(asset='BTC', amount='1.1',
                                       isIsolated='TRUE', symbol='ETHBTC')
```

**Returns** API response

```
{
  "tranId": 100000001
}
```

**Raises** BinanceRequestException, BinanceAPIException

**create\_margin\_order** (\*\*params)

Post a new order for margin account.

<https://binance-docs.github.io/apidocs/spot/en/#margin-account-new-order-trade>

**Parameters**

- **symbol** (*str*) – required

- **isIsolated** (*str*) – set to ‘TRUE’ for isolated margin (default ‘FALSE’)
- **side** (*str*) – required
- **type** (*str*) – required
- **quantity** (*decimal*) – required
- **price** (*str*) – required
- **stopPrice** (*str*) – Used with STOP\_LOSS, STOP\_LOSS\_LIMIT, TAKE\_PROFIT, and TAKE\_PROFIT\_LIMIT orders.
- **timeInForce** (*str*) – required if limit order GTC,IOC,FOK
- **newClientOrderId** (*str*) – A unique id for the order. Automatically generated if not sent.
- **icebergQty** (*str*) – Used with LIMIT, STOP\_LOSS\_LIMIT, and TAKE\_PROFIT\_LIMIT to create an iceberg order.
- **newOrderRespType** (*str*) – Set the response JSON. ACK, RESULT, or FULL; MARKET and LIMIT order types default to FULL, all other orders default to ACK.
- **recvWindow** (*int*) – the number of milliseconds the request is valid for

**Returns** API response

Response ACK:

```
{
  "symbol": "BTCUSDT",
  "orderId": 28,

```

**Raises** `BinanceRequestException`, `BinanceAPIException`, `BinanceOrderException`, `BinanceOrderMinAmountException`, `BinanceOrderMinPriceException`, `BinanceOrderMinTotalException`, `BinanceOrderUnknownSymbolException`, `BinanceOrderInactiveSymbolException`

**create\_oco\_order** (\*\*params)

Send in a new OCO order

<https://github.com/binance/binance-spot-api-docs/blob/master/rest-api.md#new-oco-trade>

#### Parameters

- **symbol** (*str*) – required
- **listClientOrderId** (*str*) – A unique id for the list order. Automatically generated if not sent.
- **side** (*str*) – required

- **quantity** (*decimal*) – required
- **limitClientId** (*str*) – A unique id for the limit order. Automatically generated if not sent.
- **price** (*str*) – required
- **limitIcebergQty** (*decimal*) – Used to make the LIMIT\_MAKER leg an iceberg order.
- **stopClientId** (*str*) – A unique id for the stop order. Automatically generated if not sent.
- **stopPrice** (*str*) – required
- **stopLimitPrice** (*str*) – If provided, stopLimitTimeInForce is required.
- **stopIcebergQty** (*decimal*) – Used with STOP\_LOSS\_LIMIT leg to make an iceberg order.
- **stopLimitTimeInForce** (*str*) – Valid values are GTC/FOK/IOC.
- **newOrderRespType** (*str*) – Set the response JSON. ACK, RESULT, or FULL; default: RESULT.
- **recvWindow** (*int*) – the number of milliseconds the request is valid for

**Returns** API response

Response ACK:

```
{
}
```

Response RESULT:

```
{
}
```

Response FULL:

```
{
}
```

**Raises** BinanceRequestException, BinanceAPIException, BinanceOrderException, BinanceOrderMinAmountException, BinanceOrderMinPriceException, BinanceOrderMinTotalException, BinanceOrderUnknownSymbolException, BinanceOrderInactiveSymbolException

**create\_order** (\*\**params*)

Send in a new order

Any order with an icebergQty MUST have timeInForce set to GTC.

<https://github.com/binance/binance-spot-api-docs/blob/master/rest-api.md#new-order-trade>

**Parameters**

- **symbol** (*str*) – required
- **side** (*str*) – required
- **type** (*str*) – required
- **timeInForce** (*str*) – required if limit order

- **quantity** (*decimal*) – required
- **quoteOrderQty** (*decimal*) – amount the user wants to spend (when buying) or receive (when selling) of the quote asset, applicable to MARKET orders
- **price** (*str*) – required
- **newClientOrderId** (*str*) – A unique id for the order. Automatically generated if not sent.
- **icebergQty** (*decimal*) – Used with LIMIT, STOP\_LOSS\_LIMIT, and TAKE\_PROFIT\_LIMIT to create an iceberg order.
- **newOrderRespType** (*str*) – Set the response JSON. ACK, RESULT, or FULL; default: RESULT.
- **recvWindow** (*int*) – the number of milliseconds the request is valid for

**Returns** API response

Response ACK:

```
{
  "symbol": "LTCBTC",
  "orderId": 1,
  "clientOrderId": "myOrder1" # Will be newClientOrderId
  "transactTime": 1499827319559
}
```

Response RESULT:

```
{
  "symbol": "BTCUSDT",
  "orderId": 28,
  "clientOrderId": "6gCrw2kRUAf9CvJDGP16IP",
  "transactTime": 1507725176595,

        "commissionAsset": "USDT"
    }
]
}

```

**Raises** `BinanceRequestException`, `BinanceAPIException`, `BinanceOrderException`, `BinanceOrderMinAmountException`, `BinanceOrderMinPriceException`, `BinanceOrderMinTotalException`, `BinanceOrderUnknownSymbolException`, `BinanceOrderInactiveSymbolException`

**create\_sub\_account\_futures\_transfer** (*\*\*params*)

Execute sub-account Futures transfer

<https://github.com/binance-exchange/binance-official-api-docs/blob/9dbe0e961b80557bb19708a707c7fad08842b28e/wapi-api.md#sub-account-transferfor-master-account>

#### Parameters

- **fromEmail** (*str*) – required - Sender email
- **toEmail** (*str*) – required - Recipient email
- **futuresType** (*int*) – required
- **asset** (*str*) – required
- **amount** (*decimal*) – required
- **recvWindow** (*int*) – optional

**Returns** API response

```
{
  "success":true,
  "txnId":"2934662589"
}
```

**Raises** `BinanceRequestException`, `BinanceAPIException`

**create\_sub\_account\_transfer** (\*\*params)

Execute sub-account transfer

<https://binance-docs.github.io/apidocs/spot/en/#sub-account-spot-asset-transfer-for-master-account>

#### Parameters

- **fromEmail** (*str*) – required - Sender email
- **toEmail** (*str*) – required - Recipient email
- **asset** (*str*) – required
- **amount** (*decimal*) – required
- **recvWindow** (*int*) – optional

**Returns** API response

```
{
  "success":true,
  "txnId":"2966662589"
}
```

**Raises** `BinanceRequestException`, `BinanceAPIException`

**create\_test\_order** (\*\*params)

Test new order creation and signature/recvWindow long. Creates and validates a new order but does not send it into the matching engine.

<https://github.com/binance/binance-spot-api-docs/blob/master/rest-api.md#test-new-order-trade>

#### Parameters

- **symbol** (*str*) – required
- **side** (*str*) – required
- **type** (*str*) – required
- **timeInForce** (*str*) – required if limit order
- **quantity** (*decimal*) – required
- **price** (*str*) – required
- **newClientOrderId** (*str*) – A unique id for the order. Automatically generated if not sent.
- **icebergQty** (*decimal*) – Used with iceberg orders
- **newOrderRespType** (*str*) – Set the response JSON. ACK, RESULT, or FULL; default: RESULT.
- **recvWindow** (*int*) – The number of milliseconds the request is valid for

**Returns** API response

```
{ }
```

**Raises** BinanceRequestException, BinanceAPIException, BinanceOrderException, BinanceOrderMinAmountException, BinanceOrderMinPriceException, BinanceOrderMinTotalException, BinanceOrderUnknownSymbolException, BinanceOrderInactiveSymbolException

**disable\_fast\_withdraw\_switch** (\*\*params)

Disable Fast Withdraw Switch

[https://binance-docs.github.io/apidocs/spot/en/#disable-fast-withdraw-switch-user\\_data](https://binance-docs.github.io/apidocs/spot/en/#disable-fast-withdraw-switch-user_data)

**Parameters** **recvWindow** (*int*) – optional

**Returns** API response

**Raises** BinanceRequestException, BinanceAPIException

**enable\_fast\_withdraw\_switch** (\*\*params)

Enable Fast Withdraw Switch

[https://binance-docs.github.io/apidocs/spot/en/#enable-fast-withdraw-switch-user\\_data](https://binance-docs.github.io/apidocs/spot/en/#enable-fast-withdraw-switch-user_data)

**Parameters** **recvWindow** (*int*) – optional

**Returns** API response

**Raises** BinanceRequestException, BinanceAPIException

**enable\_subaccount\_futures** (\*\*params)

Enable Futures for Sub-account (For Master Account)

<https://binance-docs.github.io/apidocs/spot/en/#enable-futures-for-sub-account-for-master-account>

**Parameters**

- **email** (*str*) – required - Sub account email
- **recvWindow** (*int*) – optional

**Returns** API response

```
{
    "email": "123@test.com",
    "isFuturesEnabled": true // true or false
}
```

**Raises** BinanceRequestException, BinanceAPIException

**enable\_subaccount\_margin** (\*\*params)

Enable Margin for Sub-account (For Master Account)

<https://binance-docs.github.io/apidocs/spot/en/#enable-margin-for-sub-account-for-master-account>

**Parameters**

- **email** (*str*) – required - Sub account email
- **recvWindow** (*int*) – optional

**Returns** API response

```
{  
    "email": "123@test.com",  
    "isMarginEnabled": true  
}
```

**Raises** BinanceRequestException, BinanceAPIException

**futures\_account** (\*\*params)

Get current account information.

[https://binance-docs.github.io/apidocs/futures/en/#account-information-user\\_data](https://binance-docs.github.io/apidocs/futures/en/#account-information-user_data)

**futures\_account\_balance** (\*\*params)

Get futures account balance

[https://binance-docs.github.io/apidocs/futures/en/#future-account-balance-user\\_data](https://binance-docs.github.io/apidocs/futures/en/#future-account-balance-user_data)

**futures\_account\_trades** (\*\*params)

Get trades for the authenticated account and symbol.

[https://binance-docs.github.io/apidocs/futures/en/#account-trade-list-user\\_data](https://binance-docs.github.io/apidocs/futures/en/#account-trade-list-user_data)

**futures\_account\_transfer** (\*\*params)

Execute transfer between spot account and futures account.

<https://binance-docs.github.io/apidocs/futures/en/#new-future-account-transfer>

**futures\_aggregate\_trades** (\*\*params)

Get compressed, aggregate trades. Trades that fill at the time, from the same order, with the same price will have the quantity aggregated.

[https://binance-docs.github.io/apidocs/futures/en/#compressed-aggregate-trades-list-market\\_data](https://binance-docs.github.io/apidocs/futures/en/#compressed-aggregate-trades-list-market_data)

**futures\_cancel\_all\_open\_orders** (\*\*params)

Cancel all open futures orders

<https://binance-docs.github.io/apidocs/futures/en/#cancel-all-open-orders-trade>

**futures\_cancel\_order** (\*\*params)

Cancel an active futures order.

<https://binance-docs.github.io/apidocs/futures/en/#cancel-order-trade>

**futures\_cancel\_orders** (\*\*params)

Cancel multiple futures orders

<https://binance-docs.github.io/apidocs/futures/en/#cancel-multiple-orders-trade>

**futures\_change\_leverage** (\*\*params)

Change user's initial leverage of specific symbol market

<https://binance-docs.github.io/apidocs/futures/en/#change-initial-leverage-trade>

**futures\_change\_margin\_type** (\*\*params)

Change the margin type for a symbol

<https://binance-docs.github.io/apidocs/futures/en/#change-margin-type-trade>

**futures\_change\_position\_margin** (\*\*params)

Change the position margin for a symbol

<https://binance-docs.github.io/apidocs/futures/en/#modify-isolated-position-margin-trade>

**futures\_change\_position\_mode** (\*\*params)  
Change position mode for authenticated account

<https://binance-docs.github.io/apidocs/futures/en/#change-position-mode-trade>

**futures\_coin\_account** (\*\*params)  
Get current account information.

[https://binance-docs.github.io/apidocs/delivery/en/#account-information-user\\_data](https://binance-docs.github.io/apidocs/delivery/en/#account-information-user_data)

**futures\_coin\_account\_balance** (\*\*params)  
Get futures account balance

[https://binance-docs.github.io/apidocs/delivery/en/#futures-account-balance-user\\_data](https://binance-docs.github.io/apidocs/delivery/en/#futures-account-balance-user_data)

**futures\_coin\_account\_trades** (\*\*params)  
Get trades for the authenticated account and symbol.

[https://binance-docs.github.io/apidocs/delivery/en/#account-trade-list-user\\_data](https://binance-docs.github.io/apidocs/delivery/en/#account-trade-list-user_data)

**futures\_coin\_aggregate\_trades** (\*\*params)  
Get compressed, aggregate trades. Trades that fill at the time, from the same order, with the same price will have the quantity aggregated.

<https://binance-docs.github.io/apidocs/delivery/en/#compressed-aggregate-trades-list>

**futures\_coin\_cancel\_all\_open\_orders** (\*\*params)  
Cancel all open futures orders

<https://binance-docs.github.io/apidocs/delivery/en/#cancel-all-open-orders-trade>

**futures\_coin\_cancel\_order** (\*\*params)  
Cancel an active futures order.

<https://binance-docs.github.io/apidocs/delivery/en/#cancel-order-trade>

**futures\_coin\_cancel\_orders** (\*\*params)  
Cancel multiple futures orders

<https://binance-docs.github.io/apidocs/delivery/en/#cancel-multiple-orders-trade>

**futures\_coin\_change\_leverage** (\*\*params)  
Change user's initial leverage of specific symbol market

<https://binance-docs.github.io/apidocs/delivery/en/#change-initial-leverage-trade>

**futures\_coin\_change\_margin\_type** (\*\*params)  
Change the margin type for a symbol

<https://binance-docs.github.io/apidocs/delivery/en/#change-margin-type-trade>

**futures\_coin\_change\_position\_margin** (\*\*params)  
Change the position margin for a symbol

<https://binance-docs.github.io/apidocs/delivery/en/#modify-isolated-position-margin-trade>

**futures\_coin\_change\_position\_mode** (\*\*params)  
Change user's position mode (Hedge Mode or One-way Mode ) on EVERY symbol

<https://binance-docs.github.io/apidocs/delivery/en/#change-position-mode-trade>

**futures\_coin\_continuous\_klines** (\*\*params)  
Kline/candlestick bars for a specific contract type. Klines are uniquely identified by their open time.

<https://binance-docs.github.io/apidocs/delivery/en/#continuous-contract-kline-candlestick-data>

- futures\_coin\_create\_order** (\*\*params)  
Send in a new order.  
<https://binance-docs.github.io/apidocs/delivery/en/#new-order-trade>
- futures\_coin\_exchange\_info** ()  
Current exchange trading rules and symbol information  
<https://binance-docs.github.io/apidocs/delivery/en/#exchange-information>
- futures\_coin\_funding\_rate** (\*\*params)  
Get funding rate history  
<https://binance-docs.github.io/apidocs/delivery/en/#get-funding-rate-history-of-perpetual-futures>
- futures\_coin\_get\_all\_orders** (\*\*params)  
Get all futures account orders; active, canceled, or filled.  
[https://binance-docs.github.io/apidocs/delivery/en/#all-orders-user\\_data](https://binance-docs.github.io/apidocs/delivery/en/#all-orders-user_data)
- futures\_coin\_get\_open\_orders** (\*\*params)  
Get all open orders on a symbol.  
[https://binance-docs.github.io/apidocs/delivery/en/#current-all-open-orders-user\\_data](https://binance-docs.github.io/apidocs/delivery/en/#current-all-open-orders-user_data)
- futures\_coin\_get\_order** (\*\*params)  
Check an order's status.  
[https://binance-docs.github.io/apidocs/delivery/en/#query-order-user\\_data](https://binance-docs.github.io/apidocs/delivery/en/#query-order-user_data)
- futures\_coin\_get\_position\_mode** (\*\*params)  
Get user's position mode (Hedge Mode or One-way Mode ) on EVERY symbol  
[https://binance-docs.github.io/apidocs/delivery/en/#get-current-position-mode-user\\_data](https://binance-docs.github.io/apidocs/delivery/en/#get-current-position-mode-user_data)
- futures\_coin\_historical\_trades** (\*\*params)  
Get older market historical trades.  
[https://binance-docs.github.io/apidocs/delivery/en/#old-trades-lookup-market\\_data](https://binance-docs.github.io/apidocs/delivery/en/#old-trades-lookup-market_data)
- futures\_coin\_income\_history** (\*\*params)  
Get income history for authenticated account  
[https://binance-docs.github.io/apidocs/delivery/en/#get-income-history-user\\_data](https://binance-docs.github.io/apidocs/delivery/en/#get-income-history-user_data)
- futures\_coin\_index\_price\_klines** (\*\*params)  
Kline/candlestick bars for the index price of a pair..  
<https://binance-docs.github.io/apidocs/delivery/en/#index-price-kline-candlestick-data>
- futures\_coin\_klines** (\*\*params)  
Kline/candlestick bars for a symbol. Klines are uniquely identified by their open time.  
<https://binance-docs.github.io/apidocs/delivery/en/#kline-candlestick-data>
- futures\_coin\_leverage\_bracket** (\*\*params)  
Notional and Leverage Brackets  
[https://binance-docs.github.io/apidocs/delivery/en/#notional-bracket-for-pair-user\\_data](https://binance-docs.github.io/apidocs/delivery/en/#notional-bracket-for-pair-user_data)
- futures\_coin\_liquidation\_orders** (\*\*params)  
Get all liquidation orders  
<https://binance-docs.github.io/apidocs/delivery/en/#get-all-liquidation-orders>

**futures\_coin\_mark\_price** (\*\*params)  
Get Mark Price and Funding Rate  
<https://binance-docs.github.io/apidocs/delivery/en/#index-price-and-mark-price>

**futures\_coin\_mark\_price\_klines** (\*\*params)  
Kline/candlestick bars for the index price of a pair..  
<https://binance-docs.github.io/apidocs/delivery/en/#mark-price-kline-candlestick-data>

**futures\_coin\_open\_interest** (\*\*params)  
Get present open interest of a specific symbol.  
<https://binance-docs.github.io/apidocs/delivery/en/#open-interest>

**futures\_coin\_open\_interest\_hist** (\*\*params)  
Get open interest statistics of a specific symbol.  
<https://binance-docs.github.io/apidocs/delivery/en/#open-interest-statistics-market-data>

**futures\_coin\_order\_book** (\*\*params)  
Get the Order Book for the market  
<https://binance-docs.github.io/apidocs/delivery/en/#order-book>

**futures\_coin\_orderbook\_ticker** (\*\*params)  
Best price/qty on the order book for a symbol or symbols.  
<https://binance-docs.github.io/apidocs/delivery/en/#symbol-order-book-ticker>

**futures\_coin\_ping** ()  
Test connectivity to the Rest API  
<https://binance-docs.github.io/apidocs/delivery/en/#test-connectivity>

**futures\_coin\_position\_information** (\*\*params)  
Get position information  
[https://binance-docs.github.io/apidocs/delivery/en/#position-information-user\\_data](https://binance-docs.github.io/apidocs/delivery/en/#position-information-user_data)

**futures\_coin\_position\_margin\_history** (\*\*params)  
Get position margin change history  
<https://binance-docs.github.io/apidocs/delivery/en/#get-position-margin-change-history-trade>

**futures\_coin\_recent\_trades** (\*\*params)  
Get recent trades (up to last 500).  
<https://binance-docs.github.io/apidocs/delivery/en/#recent-trades-list>

**futures\_coin\_symbol\_ticker** (\*\*params)  
Latest price for a symbol or symbols.  
<https://binance-docs.github.io/apidocs/delivery/en/#symbol-price-ticker>

**futures\_coin\_ticker** (\*\*params)  
24 hour rolling window price change statistics.  
<https://binance-docs.github.io/apidocs/delivery/en/#24hr-ticker-price-change-statistics>

**futures\_coin\_time** ()  
Test connectivity to the Rest API and get the current server time.  
<https://binance-docs.github.io/apidocs/delivery/en/#check-server-time>

**futures\_continuous\_klines** (\*\*params)

Kline/candlestick bars for a specific contract type. Klines are uniquely identified by their open time.

<https://binance-docs.github.io/apidocs/futures/en/#continuous-contract-kline-candlestick-data>

**futures\_create\_order** (\*\*params)

Send in a new order.

<https://binance-docs.github.io/apidocs/futures/en/#new-order-trade>

**futures\_exchange\_info** ()

Current exchange trading rules and symbol information

[https://binance-docs.github.io/apidocs/futures/en/#exchange-information-market\\_data](https://binance-docs.github.io/apidocs/futures/en/#exchange-information-market_data)

**futures\_funding\_rate** (\*\*params)

Get funding rate history

[https://binance-docs.github.io/apidocs/futures/en/#get-funding-rate-history-market\\_data](https://binance-docs.github.io/apidocs/futures/en/#get-funding-rate-history-market_data)

**futures\_get\_all\_orders** (\*\*params)

Get all futures account orders; active, canceled, or filled.

[https://binance-docs.github.io/apidocs/futures/en/#all-orders-user\\_data](https://binance-docs.github.io/apidocs/futures/en/#all-orders-user_data)

**futures\_get\_open\_orders** (\*\*params)

Get all open orders on a symbol.

[https://binance-docs.github.io/apidocs/futures/en/#current-open-orders-user\\_data](https://binance-docs.github.io/apidocs/futures/en/#current-open-orders-user_data)

**futures\_get\_order** (\*\*params)

Check an order's status.

[https://binance-docs.github.io/apidocs/futures/en/#query-order-user\\_data](https://binance-docs.github.io/apidocs/futures/en/#query-order-user_data)

**futures\_get\_position\_mode** (\*\*params)

Get position mode for authenticated account

[https://binance-docs.github.io/apidocs/futures/en/#get-current-position-mode-user\\_data](https://binance-docs.github.io/apidocs/futures/en/#get-current-position-mode-user_data)

**futures\_historical\_klines** (symbol, interval, start\_str, end\_str=None, limit=500)

Get historical futures klines from Binance

#### Parameters

- **symbol** (*str*) – Name of symbol pair e.g BNBBTC
- **interval** (*str*) – Binance Kline interval
- **start\_str** (*str/int*) – Start date string in UTC format or timestamp in milliseconds
- **end\_str** (*str/int*) – optional - end date string in UTC format or timestamp in milliseconds (default will fetch everything up to now)
- **limit** (*int*) – Default 500; max 1000.

**Returns** list of OHLCV values

**futures\_historical\_klines\_generator** (symbol, interval, start\_str, end\_str=None)

Get historical futures klines generator from Binance

#### Parameters

- **symbol** (*str*) – Name of symbol pair e.g BNBBTC
- **interval** (*str*) – Binance Kline interval
- **start\_str** (*str/int*) – Start date string in UTC format or timestamp in milliseconds

- **end\_str** (*str/int*) – optional - end date string in UTC format or timestamp in milliseconds (default will fetch everything up to now)

**Returns** generator of OHLCV values

**futures\_historical\_trades** (*\*\*params*)

Get older market historical trades.

[https://binance-docs.github.io/apidocs/futures/en/#old-trades-lookup-market\\_data](https://binance-docs.github.io/apidocs/futures/en/#old-trades-lookup-market_data)

**futures\_income\_history** (*\*\*params*)

Get income history for authenticated account

[https://binance-docs.github.io/apidocs/futures/en/#get-income-history-user\\_data](https://binance-docs.github.io/apidocs/futures/en/#get-income-history-user_data)

**futures\_klines** (*\*\*params*)

Kline/candlestick bars for a symbol. Klines are uniquely identified by their open time.

[https://binance-docs.github.io/apidocs/futures/en/#kline-candlestick-data-market\\_data](https://binance-docs.github.io/apidocs/futures/en/#kline-candlestick-data-market_data)

**futures\_leverage\_bracket** (*\*\*params*)

Notional and Leverage Brackets

[https://binance-docs.github.io/apidocs/futures/en/#notional-and-leverage-brackets-market\\_data](https://binance-docs.github.io/apidocs/futures/en/#notional-and-leverage-brackets-market_data)

**futures\_liquidation\_orders** (*\*\*params*)

Get all liquidation orders

[https://binance-docs.github.io/apidocs/futures/en/#get-all-liquidation-orders-market\\_data](https://binance-docs.github.io/apidocs/futures/en/#get-all-liquidation-orders-market_data)

**futures\_mark\_price** (*\*\*params*)

Get Mark Price and Funding Rate

[https://binance-docs.github.io/apidocs/futures/en/#mark-price-market\\_data](https://binance-docs.github.io/apidocs/futures/en/#mark-price-market_data)

**futures\_open\_interest** (*\*\*params*)

Get present open interest of a specific symbol.

[https://binance-docs.github.io/apidocs/futures/en/#open-interest-market\\_data](https://binance-docs.github.io/apidocs/futures/en/#open-interest-market_data)

**futures\_open\_interest\_hist** (*\*\*params*)

Get open interest statistics of a specific symbol.

<https://binance-docs.github.io/apidocs/futures/en/#open-interest-statistics>

**futures\_order\_book** (*\*\*params*)

Get the Order Book for the market

[https://binance-docs.github.io/apidocs/futures/en/#order-book-market\\_data](https://binance-docs.github.io/apidocs/futures/en/#order-book-market_data)

**futures\_orderbook\_ticker** (*\*\*params*)

Best price/qty on the order book for a symbol or symbols.

[https://binance-docs.github.io/apidocs/futures/en/#symbol-order-book-ticker-market\\_data](https://binance-docs.github.io/apidocs/futures/en/#symbol-order-book-ticker-market_data)

**futures\_ping** ()

Test connectivity to the Rest API

<https://binance-docs.github.io/apidocs/futures/en/#test-connectivity>

**futures\_position\_information** (*\*\*params*)

Get position information

[https://binance-docs.github.io/apidocs/futures/en/#position-information-user\\_data](https://binance-docs.github.io/apidocs/futures/en/#position-information-user_data)

**futures\_position\_margin\_history** (\*\*params)

Get position margin change history

<https://binance-docs.github.io/apidocs/futures/en/#get-postion-margin-change-history-trade>

**futures\_recent\_trades** (\*\*params)

Get recent trades (up to last 500).

[https://binance-docs.github.io/apidocs/futures/en/#recent-trades-list-market\\_data](https://binance-docs.github.io/apidocs/futures/en/#recent-trades-list-market_data)

**futures\_symbol\_ticker** (\*\*params)

Latest price for a symbol or symbols.

[https://binance-docs.github.io/apidocs/futures/en/#symbol-price-ticker-market\\_data](https://binance-docs.github.io/apidocs/futures/en/#symbol-price-ticker-market_data)

**futures\_ticker** (\*\*params)

24 hour rolling window price change statistics.

[https://binance-docs.github.io/apidocs/futures/en/#24hr-ticker-price-change-statistics-market\\_data](https://binance-docs.github.io/apidocs/futures/en/#24hr-ticker-price-change-statistics-market_data)

**futures\_time** ()

Test connectivity to the Rest API and get the current server time.

<https://binance-docs.github.io/apidocs/futures/en/#check-server-time>

**get\_account** (\*\*params)

Get current account information.

[https://github.com/binance/binance-spot-api-docs/blob/master/rest-api.md#account-information-user\\_data](https://github.com/binance/binance-spot-api-docs/blob/master/rest-api.md#account-information-user_data)

**Parameters** `recvWindow` (*int*) – the number of milliseconds the request is valid for

**Returns** API response

```
{
  "makerCommission": 15,
  "takerCommission": 15,
  "buyerCommission": 0,
  "sellerCommission": 0,
  "canTrade": true,
  "canWithdraw": true,
  "canDeposit": true,
  "balances": [
    {
      "asset": "BTC",
      "free": "4723846.89208129",
      "locked": "0.00000000"
    },
    {
      "asset": "LTC",
      "free": "4763368.68006011",
      "locked": "0.00000000"
    }
  ]
}
```

**Raises** `BinanceRequestException`, `BinanceAPIException`

**get\_account\_api\_trading\_status** (\*\*params)

Fetch account api trading status detail.

[https://binance-docs.github.io/apidocs/spot/en/#account-api-trading-status-user\\_data](https://binance-docs.github.io/apidocs/spot/en/#account-api-trading-status-user_data)

**Parameters** `recvWindow` (*int*) – the number of milliseconds the request is valid for

**Returns** API response

```
{ "success": true, // Query result "status": { // API trading status detail
  "isLocked": false, // API trading function is locked or not "plannedRecoverTime": 0, // If
  API trading function is locked, this is the planned recover time "triggerCondition": {
    "gcr": 150, // Number of GTC orders "ifer": 150, // Number of FOK/IOC orders "ufr":

  }, "indicators": { // The indicators updated every 30 seconds
    "BTCUSDT": [ // The symbol
      { "i": "UFR", // Unfilled Ratio (UFR) "c": 20, // Count of all orders "v": 0.05,
        // Current UFR value "t": 0.995 // Trigger UFR value
      }, {
        "i": "IFER", // IOC/FOK Expiration Ratio (IFER) "c": 20, // Count of
        FOK/IOC orders "v": 0.99, // Current IFER value "t": 0.99 // Trigger IFER
        value
      }, {
        "i": "GCR", // GTC Cancellation Ratio (GCR) "c": 20, // Count of GTC
        orders "v": 0.99, // Current GCR value "t": 0.99 // Trigger GCR value
      }
    ], "ETHUSDT": [
      { "i": "UFR", "c": 20, "v": 0.05, "t": 0.995
      }, {
        "i": "IFER", "c": 20, "v": 0.99, "t": 0.99
      }, {
        "i": "GCR", "c": 20, "v": 0.99, "t": 0.99
      }
    ]
  }, "updateTime": 1547630471725 // The query result return time
}
```

**Raises** `BinanceWithdrawException`

`get_account_snapshot` (*\*\*params*)

Get daily account snapshot of specific type.

[https://binance-docs.github.io/apidocs/spot/en/#daily-account-snapshot-user\\_data](https://binance-docs.github.io/apidocs/spot/en/#daily-account-snapshot-user_data)

**Parameters**

- **type** (*string*) – required. Valid values are SPOT/MARGIN/FUTURES.
- **startTime** (*int*) – optional
- **endTime** (*int*) – optional
- **limit** (*int*) – optional
- **recvWindow** (*int*) – optional

**Returns** API response

```
{
  "code":200, // 200 for success; others are error codes
  "msg":""," // error message
  "snapshotVos":[
    {
      "data":{

}

```

**Raises** `BinanceRequestException`, `BinanceAPIException`**get\_account\_status** (\*\*params)

Get account status detail.

[https://binance-docs.github.io/apidocs/spot/en/#account-status-user\\_data](https://binance-docs.github.io/apidocs/spot/en/#account-status-user_data)**Parameters** `recvWindow` (*int*) – the number of milliseconds the request is valid for**Returns** API response

```

{
  "msg": "Order failed:Low Order fill rate! Will be reactivated after 5_
↪minutes.",
  "success": true,
  "objs": [
    "5"
  ]
}

```

**Raises** BinanceWithdrawException

**get\_aggregate\_trades** (\*\*params)

Get compressed, aggregate trades. Trades that fill at the time, from the same order, with the same price will have the quantity aggregated.

<https://github.com/binance/binance-spot-api-docs/blob/master/rest-api.md#compressedaggregate-trades-list>

**Parameters**

- **symbol** (*str*) – required
- **fromId** (*str*) – ID to get aggregate trades from INCLUSIVE.
- **startTime** (*int*) – Timestamp in ms to get aggregate trades from INCLUSIVE.
- **endTime** (*int*) – Timestamp in ms to get aggregate trades until INCLUSIVE.
- **limit** (*int*) – Default 500; max 500.

**Returns** API response

```
[
  {
    "a": 26129,           # Aggregate tradeId
    "p": "0.01633102",  # Price
    "q": "4.70443515",  # Quantity
    "f": 27781,         # First tradeId
    "l": 27781,         # Last tradeId
    "T": 1498793709153, # Timestamp
    "m": true,          # Was the buyer the maker?
    "M": true           # Was the trade the best price match?
  }
]
```

**Raises** BinanceRequestException, BinanceAPIException

**get\_all\_coins\_info** (\*\*params)

Get information of coins (available for deposit and withdraw) for user.

[https://binance-docs.github.io/apidocs/spot/en/#all-coins-39-information-user\\_data](https://binance-docs.github.io/apidocs/spot/en/#all-coins-39-information-user_data)

**Parameters** **recvWindow** (*int*) – optional

**Returns** API response

```
{
  "coin": "BTC",
  "depositAllEnable": true,
  "withdrawAllEnable": true,
  "name": "Bitcoin",
  "free": "0",
  "locked": "0",
  "freeze": "0",
  "withdrawing": "0",
  "ipoing": "0",
  "ipoable": "0",
  "storage": "0",
  "isLegalMoney": false,
  "trading": true,
```

(continues on next page)

(continued from previous page)

```

    "isBuyAllowed": true,
    "isMarginTrade": true,
    "isSellAllowed": true,
    "quote": "BTC",
    "symbol": "TRXBTC"
  }
]
```

**Raises** `BinanceRequestException`, `BinanceAPIException`

**get\_all\_margin\_orders** (\*\**params*)

Query all margin accounts orders

If `orderId` is set, it will get orders  $\geq$  that `orderId`. Otherwise most recent orders are returned.

For some historical orders `cummulativeQuoteQty` will be  $< 0$ , meaning the data is not available at this time.

[https://binance-docs.github.io/apidocs/spot/en/#query-margin-account-39-s-all-order-user\\_data](https://binance-docs.github.io/apidocs/spot/en/#query-margin-account-39-s-all-order-user_data)

#### Parameters

- **symbol** (*str*) – required
- **isIsolated** (*str*) – set to ‘TRUE’ for isolated margin (default ‘FALSE’)
- **orderId** (*str*) – optional
- **startTime** (*str*) – optional
- **endTime** (*str*) – optional
- **limit** (*int*) – Default 500; max 1000
- **recvWindow** (*int*) – the number of milliseconds the request is valid for

#### Returns

API response

```
[
  {

]

```

**Raises** `BinanceRequestException`, `BinanceAPIException`

**get\_all\_orders** (*\*\*params*)

Get all account orders; active, canceled, or filled.

[https://github.com/binance/binance-spot-api-docs/blob/master/rest-api.md#all-orders-user\\_data](https://github.com/binance/binance-spot-api-docs/blob/master/rest-api.md#all-orders-user_data)

**Parameters**

- **symbol** (*str*) – required
- **orderId** (*int*) – The unique order id
- **limit** (*int*) – Default 500; max 500.
- **recvWindow** (*int*) – the number of milliseconds the request is valid for

**Returns** API response

```

[
  {
    "symbol": "LTCBTC",
    "orderId": 1,
    "clientOrderId": "myOrder1",
    "price": "0.1",
    "origQty": "1.0",
    "executedQty": "0.0",
    "status": "NEW",
    "timeInForce": "GTC",
    "type": "LIMIT",
    "side": "BUY",
    "stopPrice": "0.0",
    "icebergQty": "0.0",
    "time": 1499827319559
  }
]

```

**Raises** `BinanceRequestException`, `BinanceAPIException`

**get\_all\_tickers** ()

Latest price for all symbols.

<https://www.binance.com/restapipub.html#symbols-price-ticker>

**Returns** List of market tickers

```

[
  {
    "symbol": "LTCBTC",
    "price": "4.00000200"
  },
  {
    "symbol": "ETHBTC",
    "price": "0.07946600"
  }
]

```

(continues on next page)

(continued from previous page)

```
}
]
```

**Raises** `BinanceRequestException`, `BinanceAPIException`

**get\_asset\_balance** (*asset*, *\*\*params*)

Get current asset balance.

[https://github.com/binance/binance-spot-api-docs/blob/master/rest-api.md#account-information-user\\_data](https://github.com/binance/binance-spot-api-docs/blob/master/rest-api.md#account-information-user_data)

**Parameters**

- **asset** (*str*) – required
- **recvWindow** (*int*) – the number of milliseconds the request is valid for

**Returns** dictionary or None if not found

```
{
  "asset": "BTC",
  "free": "4723846.89208129",
  "locked": "0.00000000"
}
```

**Raises** `BinanceRequestException`, `BinanceAPIException`

**get\_asset\_details** (*\*\*params*)

Fetch details on assets.

[https://binance-docs.github.io/apidocs/spot/en/#asset-detail-user\\_data](https://binance-docs.github.io/apidocs/spot/en/#asset-detail-user_data)

**Parameters** **recvWindow** (*int*) – the number of milliseconds the request is valid for

**Returns** API response

```
{
  "success": true,
  "assetDetail": {
    "CTR": {
      "minWithdrawAmount": "70.00000000", //min withdraw amount
      "depositStatus": false, //deposit status
      "withdrawFee": 35, // withdraw fee
      "withdrawStatus": true, //withdraw status
      "depositTip": "Delisted, Deposit Suspended" //reason
    },
    "SKY": {
      "minWithdrawAmount": "0.02000000",
      "depositStatus": true,
      "withdrawFee": 0.01,
      "withdrawStatus": true
    }
  }
}
```

**Raises** `BinanceWithdrawException`

**get\_asset\_dividend\_history** (\*\*params)

Query asset dividend record.

[https://binance-docs.github.io/apidocs/spot/en/#asset-dividend-record-user\\_data](https://binance-docs.github.io/apidocs/spot/en/#asset-dividend-record-user_data)

**Parameters**

- **asset** (*str*) – optional
- **startTime** (*long*) – optional
- **endTime** (*long*) – optional
- **recvWindow** (*int*) – the number of milliseconds the request is valid for

```
result = client.get_asset_dividend_history()
```

**Returns** API response

```
{
  "rows": [
    {
      "amount": "10.00000000",
      "asset": "BHFT",
      "divTime": 1563189166000,
      "enInfo": "BHFT distribution",
      "tranId": 2968885920
    },
    {
      "amount": "10.00000000",
      "asset": "BHFT",
      "divTime": 1563189165000,
      "enInfo": "BHFT distribution",
      "tranId": 2968885920
    }
  ],
  "total": 2
}
```

**Raises** BinanceRequestException, BinanceAPIException

**get\_avg\_price** (\*\*params)

Current average price for a symbol.

<https://github.com/binance/binance-spot-api-docs/blob/master/rest-api.md#current-average-price>

**Parameters** **symbol** (*str*) –

**Returns** API response

```
{
  "mins": 5,
  "price": "9.35751834"
}
```

**get\_bnb\_burn\_spot\_margin** (\*\*params)

Get BNB Burn Status

[https://binance-docs.github.io/apidocs/spot/en/#get-bnb-burn-status-user\\_data](https://binance-docs.github.io/apidocs/spot/en/#get-bnb-burn-status-user_data)

```
status = client.get_bnb_burn_spot_margin()
```

**Returns** API response

```
{
  "spotBNBBurn": true,
  "interestBNBBurn": false
}
```

**Raises** `BinanceRequestException`, `BinanceAPIException`

**get\_deposit\_address** (\*\*params)

Fetch a deposit address for a symbol

<https://www.binance.com/restapipub.html>

**Parameters**

- **asset** (*str*) – required
- **recvWindow** (*int*) – the number of milliseconds the request is valid for

**Returns** API response

```
{
  "address": "0x6915f16f8791d0a1cc2bf47c13a6b2a92000504b",
  "success": true,
  "addressTag": "1231212",
  "asset": "BNB"
}
```

**Raises** `BinanceRequestException`, `BinanceAPIException`

**get\_deposit\_history** (\*\*params)

Fetch deposit history.

<https://www.binance.com/restapipub.html>

**Parameters**

- **asset** (*str*) – optional
- **startTime** (*long*) – optional
- **endTime** (*long*) – optional
- **recvWindow** (*int*) – the number of milliseconds the request is valid for

**Returns** API response

```
{
  "depositList": [
    {
      "insertTime": 1508198532000,
      "amount": 0.04670582,
      "asset": "ETH",
      "status": 1
    }
  ],
}
```

(continues on next page)

(continued from previous page)

```

    "success": true
}

```

**Raises** `BinanceRequestException`, `BinanceAPIException`

`get_dust_log (**params)`

Get log of small amounts exchanged for BNB.

[https://binance-docs.github.io/apidocs/spot/en/#dustlog-user\\_data](https://binance-docs.github.io/apidocs/spot/en/#dustlog-user_data)

**Parameters** `recvWindow (int)` – the number of milliseconds the request is valid for

**Returns** API response

```

{
  "success": true,
  "results": {
    "total": 2,    //Total counts of exchange
    "rows": [

    "status": "PURCHASING",
    "type": "CUSTOMIZED_FIXED",
    "withAreaLimitation": False
  }
]

```

**Raises** `BinanceRequestException`, `BinanceAPIException`

**get\_historical\_klines** (*symbol, interval, start\_str, end\_str=None, limit=500*)

Get Historical Klines from Binance

**Parameters**

- **symbol** (*str*) – Name of symbol pair e.g BNBBTC
- **interval** (*str*) – Binance Kline interval
- **start\_str** (*str/int*) – Start date string in UTC format or timestamp in milliseconds
- **end\_str** (*str/int*) – optional - end date string in UTC format or timestamp in milliseconds (default will fetch everything up to now)
- **limit** (*int*) – Default 500; max 1000.

**Returns** list of OHLCV values

**get\_historical\_klines\_generator** (*symbol, interval, start\_str, end\_str=None*)

Get Historical Klines generator from Binance

**Parameters**

- **symbol** (*str*) – Name of symbol pair e.g BNBBTC
- **interval** (*str*) – Binance Kline interval
- **start\_str** (*str/int*) – Start date string in UTC format or timestamp in milliseconds
- **end\_str** (*str/int*) – optional - end date string in UTC format or timestamp in milliseconds (default will fetch everything up to now)

**Returns** generator of OHLCV values

**get\_historical\_trades** (*\*\*params*)

Get older trades.

<https://github.com/binance/binance-spot-api-docs/blob/master/rest-api.md#recent-trades-list>

**Parameters**

- **symbol** (*str*) – required
- **limit** (*int*) – Default 500; max 500.
- **fromId** (*str*) – TradeId to fetch from. Default gets most recent trades.

**Returns** API response

```
[
  {
    "id": 28457,
    "price": "4.00000100",
    "qty": "12.00000000",
    "time": 1499865549590,
    "isBuyerMaker": true,
    "isBestMatch": true
  }
]
```

**Raises** BinanceRequestException, BinanceAPIException

**get\_isolated\_margin\_account** (\*\*params)

Query isolated margin account details

[https://binance-docs.github.io/apidocs/spot/en/#query-isolated-margin-account-info-user\\_data](https://binance-docs.github.io/apidocs/spot/en/#query-isolated-margin-account-info-user_data)**Parameters** **symbols** – optional up to 5 margin pairs as a comma separated string

```
account_info = client.get_isolated_margin_account()
account_info = client.get_isolated_margin_account(symbols="BTCUSDT,ETHUSDT")
```

**Returns** API response

```
If "symbols" is not sent:

**get\_isolated\_margin\_symbol** (\*\*params)

Query isolated margin symbol info

[https://binance-docs.github.io/apidocs/spot/en/#query-isolated-margin-symbol-user\\_data](https://binance-docs.github.io/apidocs/spot/en/#query-isolated-margin-symbol-user_data)**Parameters** **symbol** (*str*) – name of the symbol pair

```
pair_details = client.get_isolated_margin_symbol(symbol='BTCUSDT')
```

**Returns** API response

```
{
  "symbol": "BTCUSDT",
  "base": "BTC",
  "quote": "USDT",
  "isMarginTrade": true,
  "isBuyAllowed": true,
  "isSellAllowed": true
}
```

**Raises** `BinanceRequestException`, `BinanceAPIException`

**get\_klines** (*\*\*params*)

Kline/candlestick bars for a symbol. Klines are uniquely identified by their open time.

<https://github.com/binance/binance-spot-api-docs/blob/master/rest-api.md#klinecandlestick-data>

**Parameters**

- **symbol** (*str*) – required
- **interval** (*str*) –  
–
- **limit** (*int*) –  
– Default 500; max 500.
- **startTime** (*int*) –
- **endTime** (*int*) –

**Returns** API response

```

    }
]
}

```

**Raises** BinanceRequestException, BinanceAPIException

**get\_margin\_asset** (\*\*params)

Query cross-margin asset

[https://binance-docs.github.io/apidocs/spot/en/#query-margin-asset-market\\_data](https://binance-docs.github.io/apidocs/spot/en/#query-margin-asset-market_data)

**Parameters** **asset** (*str*) – name of the asset

```
asset_details = client.get_margin_asset(asset='BNB')
```

**Returns** API response

```

{
    "assetFullName": "Binance Coin",
    "assetName": "BNB",
    "isBorrowable": false,
    "isMortgageable": true,
    "userMinBorrow": "0.00000000",
    "userMinRepay": "0.00000000"
}

```

**Raises** BinanceRequestException, BinanceAPIException

**get\_margin\_loan\_details** (\*\*params)

Query loan record

txId or startTime must be sent. txId takes precedence.

[https://binance-docs.github.io/apidocs/spot/en/#query-loan-record-user\\_data](https://binance-docs.github.io/apidocs/spot/en/#query-loan-record-user_data)

**Parameters**

- **asset** (*str*) – required

- **isolatedSymbol** (*str*) – isolated symbol (if querying isolated margin)
- **txId** (*str*) – the tranId in of the created loan
- **startTime** (*str*) – earliest timestamp to filter transactions
- **endTime** (*str*) – Used to uniquely identify this cancel. Automatically generated by default.
- **current** (*str*) – Currently querying page. Start from 1. Default:1
- **size** (*int*) – Default:10 Max:100
- **recvWindow** (*int*) – the number of milliseconds the request is valid for

### Returns

API response

```
{
  "rows": [
    { "asset": "BNB", "principal": "0.84624403", "timestamp": 1555056425000,
      //one of PENDING (pending to execution), CONFIRMED (successfully
      loaned), FAILED (execution failed, nothing happened to your account);
      "status": "CONFIRMED"
    }
  ], "total": 1
}
```

**Raises** BinanceRequestException, BinanceAPIException

**get\_margin\_order** (*\*\*params*)

Query margin accounts order

Either orderId or origClientId must be sent.

For some historical orders cummulativeQuoteQty will be < 0, meaning the data is not available at this time.

[https://binance-docs.github.io/apidocs/spot/en/#query-margin-account-39-s-order-user\\_data](https://binance-docs.github.io/apidocs/spot/en/#query-margin-account-39-s-order-user_data)

### Parameters

- **symbol** (*str*) – required
- **isIsolated** (*str*) – set to 'TRUE' for isolated margin (default 'FALSE')
- **orderId** (*str*) –
- **origClientId** (*str*) –
- **recvWindow** (*int*) – the number of milliseconds the request is valid for

### Returns

API response

```
{ "clientId": "ZwfQzuDIGpceVhKW5DvCmO", "cummulativeQuoteQty":
  "0.00000000", "executedQty": "0.00000000", "icebergQty": "0.00000000", "is-
  Working": true, "orderId": 213205622, "origQty": "0.30000000", "price":
  "0.00493630", "side": "SELL", "status": "NEW", "stopPrice": "0.00000000",
  "symbol": "BNBBTC", "time": 1562133008725, "timeInForce": "GTC", "type":
  "LIMIT", "updateTime": 1562133008725
```

}

**Raises** BinanceRequestException, BinanceAPIException**get\_margin\_price\_index** (\*\*params)

Query margin priceIndex

[https://binance-docs.github.io/apidocs/spot/en/#query-margin-priceindex-market\\_data](https://binance-docs.github.io/apidocs/spot/en/#query-margin-priceindex-market_data)**Parameters** **symbol** (*str*) – name of the symbol pair

```
price_index_details = client.get_margin_price_index(symbol='BTCUSDT')
```

**Returns** API response

```
{
  "calcTime": 1562046418000,
  "price": "0.00333930",
  "symbol": "BNBBTC"
}
```

**Raises** BinanceRequestException, BinanceAPIException**get\_margin\_repay\_details** (\*\*params)

Query repay record

txId or startTime must be sent. txId takes precedence.

[https://binance-docs.github.io/apidocs/spot/en/#query-repay-record-user\\_data](https://binance-docs.github.io/apidocs/spot/en/#query-repay-record-user_data)**Parameters**

- **asset** (*str*) – required
- **isolatedSymbol** (*str*) – isolated symbol (if querying isolated margin)
- **txId** (*str*) – the tranId in of the created loan
- **startTime** (*str*) –
- **endTime** (*str*) – Used to uniquely identify this cancel. Automatically generated by default.
- **current** (*str*) – Currently querying page. Start from 1. Default:1
- **size** (*int*) – Default:10 Max:100
- **recvWindow** (*int*) – the number of milliseconds the request is valid for

**Returns**

API response

```
{
  "rows": [
    { //Total amount repaid "amount": "14.00000000", "asset": "BNB", //In-
      interest repaid "interest": "0.01866667", //Principal repaid "principal":
      "13.98133333", //one of PENDING (pending to execution), CONFIRMED
      (successfully loaned), FAILED (execution failed, nothing happened to
      your account); "status": "CONFIRMED", "timestamp": 1563438204000,
      "txId": 2970933056
```

```

    }
    ], "total": 1
}

```

**Raises** BinanceRequestException, BinanceAPIException

**get\_margin\_symbol** (\*\*params)

Query cross-margin symbol info

[https://binance-docs.github.io/apidocs/spot/en/#query-cross-margin-pair-market\\_data](https://binance-docs.github.io/apidocs/spot/en/#query-cross-margin-pair-market_data)

**Parameters** **symbol** (*str*) – name of the symbol pair

```
pair_details = client.get_margin_symbol(symbol='BTCUSDT')
```

**Returns** API response

```

{
  "id": 323355778339572400,
  "symbol": "BTCUSDT",
  "base": "BTC",
  "quote": "USDT",
  "isMarginTrade": true,
  "isBuyAllowed": true,
  "isSellAllowed": true
}

```

**Raises** BinanceRequestException, BinanceAPIException

**get\_margin\_trades** (\*\*params)

Query margin accounts trades

If fromId is set, it will get orders >= that fromId. Otherwise most recent orders are returned.

[https://binance-docs.github.io/apidocs/spot/en/#query-margin-account-39-s-trade-list-user\\_data](https://binance-docs.github.io/apidocs/spot/en/#query-margin-account-39-s-trade-list-user_data)

**Parameters**

- **symbol** (*str*) – required
- **isIsolated** (*str*) – set to ‘TRUE’ for isolated margin (default ‘FALSE’)
- **fromId** (*str*) – optional
- **startTime** (*str*) – optional
- **endTime** (*str*) – optional
- **limit** (*int*) – Default 500; max 1000
- **recvWindow** (*int*) – the number of milliseconds the request is valid for

**Returns**

API response

```

[
  {
    "commission": "0.00006000", "commissionAsset": "BTC", "id": 34, "is-
    BestMatch": true, "isBuyer": false, "isMaker": false, "orderId": 39324,
    "price": "0.02000000", "qty": "3.00000000", "symbol": "BNBBTC", "time":
    1561973357171
  }
]

```

```

    }, { "commission": "0.00002950", "commissionAsset": "BTC", "id": 32, "is-
      BestMatch": true, "isBuyer": false, "isMaker": true, "orderId": 39319,
      "price": "0.00590000", "qty": "5.00000000", "symbol": "BNBBTC", "time":
      1561964645345
    }
  ]

```

**Raises** `BinanceRequestException`, `BinanceAPIException`

**get\_max\_margin\_loan** (\*\*params)

Query max borrow amount for an asset

[https://binance-docs.github.io/apidocs/spot/en/#query-max-borrow-user\\_data](https://binance-docs.github.io/apidocs/spot/en/#query-max-borrow-user_data)

**Parameters**

- **asset** (*str*) – required
- **isolatedSymbol** (*str*) – isolated symbol (if querying isolated margin)
- **recvWindow** (*int*) – the number of milliseconds the request is valid for

**Returns**

API response

```

{ "amount": "1.69248805"
}

```

**Raises** `BinanceRequestException`, `BinanceAPIException`

**get\_max\_margin\_transfer** (\*\*params)

Query max transfer-out amount

[https://binance-docs.github.io/apidocs/spot/en/#query-max-transfer-out-amount-user\\_data](https://binance-docs.github.io/apidocs/spot/en/#query-max-transfer-out-amount-user_data)

**Parameters**

- **asset** (*str*) – required
- **isolatedSymbol** (*str*) – isolated symbol (if querying isolated margin)
- **recvWindow** (*int*) – the number of milliseconds the request is valid for

**Returns**

API response

```

{ "amount": "3.59498107"
}

```

**Raises** `BinanceRequestException`, `BinanceAPIException`

**get\_my\_trades** (\*\*params)

Get trades for a specific symbol.

[https://github.com/binance/binance-spot-api-docs/blob/master/rest-api.md#account-trade-list-user\\_data](https://github.com/binance/binance-spot-api-docs/blob/master/rest-api.md#account-trade-list-user_data)

**Parameters**

- **symbol** (*str*) – required
- **limit** (*int*) – Default 500; max 500.
- **fromId** (*int*) – TradeId to fetch from. Default gets most recent trades.

- **recvWindow** (*int*) – the number of milliseconds the request is valid for

**Returns** API response

```
[
  {
    "id": 28457,
    "price": "4.00000100",
    "qty": "12.00000000",
    "commission": "10.10000000",
    "commissionAsset": "BNB",
    "time": 1499865549590,
    "isBuyer": true,
    "isMaker": false,
    "isBestMatch": true
  }
]
```

**Raises** BinanceRequestException, BinanceAPIException

**get\_open\_margin\_orders** (\*\**params*)

Query margin accounts open orders

If the symbol is not sent, orders for all symbols will be returned in an array (cross-margin only).

If querying isolated margin orders, both the `isIsolated='TRUE'` and `symbol=symbol_name` must be set.

When all symbols are returned, the number of requests counted against the rate limiter is equal to the number of symbols currently trading on the exchange.

[https://binance-docs.github.io/apidocs/spot/en/#query-margin-account-39-s-open-order-user\\_data](https://binance-docs.github.io/apidocs/spot/en/#query-margin-account-39-s-open-order-user_data)

**Parameters**

- **symbol** (*str*) – optional
- **isIsolated** (*str*) – set to 'TRUE' for isolated margin (default 'FALSE')
- **recvWindow** (*int*) – the number of milliseconds the request is valid for

**Returns**

API response

```
[
  {
    "clientOrderId": "qhcZw71gAkCCTv0t0k8LUK", "cumulativeQuoteQty":
    "0.00000000", "executedQty": "0.00000000", "icebergQty": "0.00000000",
    "isWorking": true, "orderId": 211842552, "origQty": "0.30000000",
    "price": "0.00475010", "side": "SELL", "status": "NEW", "stopPrice":
    "0.00000000", "symbol": "BNBBTC", "time": 1562040170089, "timeIn-
    Force": "GTC", "type": "LIMIT", "updateTime": 1562040170089
  }
]
```

**Raises** BinanceRequestException, BinanceAPIException

**get\_open\_orders** (\*\**params*)

Get all open orders on a symbol.

[https://github.com/binance/binance-spot-api-docs/blob/master/rest-api.md#current-open-orders-user\\_data](https://github.com/binance/binance-spot-api-docs/blob/master/rest-api.md#current-open-orders-user_data)

**Parameters**

- **symbol** (*str*) – optional
- **recvWindow** (*int*) – the number of milliseconds the request is valid for

**Returns** API response

```
[
  {
    "symbol": "LTCBTC",
    "orderId": 1,
    "clientOrderId": "myOrder1",
    "price": "0.1",
    "origQty": "1.0",
    "executedQty": "0.0",
    "status": "NEW",
    "timeInForce": "GTC",
    "type": "LIMIT",
    "side": "BUY",
    "stopPrice": "0.0",
    "icebergQty": "0.0",
    "time": 1499827319559
  }
]
```

**Raises** BinanceRequestException, BinanceAPIException

**get\_order** (\*\**params*)

Check an order's status. Either orderId or origClientOrderId must be sent.

[https://github.com/binance/binance-spot-api-docs/blob/master/rest-api.md#query-order-user\\_data](https://github.com/binance/binance-spot-api-docs/blob/master/rest-api.md#query-order-user_data)

**Parameters**

- **symbol** (*str*) – required
- **orderId** (*int*) – The unique order id
- **origClientOrderId** (*str*) – optional
- **recvWindow** (*int*) – the number of milliseconds the request is valid for

**Returns** API response

```
{
  "symbol": "LTCBTC",
  "orderId": 1,
  "clientOrderId": "myOrder1",
  "price": "0.1",
  "origQty": "1.0",
  "executedQty": "0.0",
  "status": "NEW",
  "timeInForce": "GTC",
  "type": "LIMIT",
  "side": "BUY",
  "stopPrice": "0.0",
  "icebergQty": "0.0",
  "time": 1499827319559
}
```

**Raises** BinanceRequestException, BinanceAPIException

**get\_order\_book** (\*\*params)

Get the Order Book for the market

<https://github.com/binance/binance-spot-api-docs/blob/master/rest-api.md#order-book>

**Parameters**

- **symbol** (*str*) – required
- **limit** (*int*) – Default 100; max 1000

**Returns** API response

```
{
  "lastUpdateId": 1027024,
  "bids": [
    [
      "4.00000000",      # PRICE
      "431.00000000",  # QTY
      []                # Can be ignored
    ]
  ],
  "asks": [
    [
      "4.00000200",
      "12.00000000",
      []
    ]
  ]
}
```

**Raises** BinanceRequestException, BinanceAPIException

**get\_orderbook\_ticker** (\*\*params)

Latest price for a symbol or symbols.

<https://github.com/binance/binance-spot-api-docs/blob/master/rest-api.md#symbol-order-book-ticker>

**Parameters** **symbol** (*str*) –

**Returns** API response

```
{
  "symbol": "LTCBTC",
  "bidPrice": "4.00000000",
  "bidQty": "431.00000000",
  "askPrice": "4.00000200",
  "askQty": "9.00000000"
}
```

OR

```
[
  {
    "symbol": "LTCBTC",
    "bidPrice": "4.00000000",
    "bidQty": "431.00000000",
    "askPrice": "4.00000200",
```

(continues on next page)

(continued from previous page)

```

    "askQty": "9.00000000"
  },
  {
    "symbol": "ETHBTC",
    "bidPrice": "0.07946700",
    "bidQty": "9.00000000",
    "askPrice": "100000.00000000",
    "askQty": "1000.00000000"
  }
]

```

**Raises** BinanceRequestException, BinanceAPIException

#### **get\_orderbook\_tickers ()**

Best price/qty on the order book for all symbols.

<https://www.binance.com/restapipub.html#symbols-order-book-ticker>

**Returns** List of order book market entries

```

[
  {
    "symbol": "LTCBTC",
    "bidPrice": "4.00000000",
    "bidQty": "431.00000000",
    "askPrice": "4.00000200",
    "askQty": "9.00000000"
  },
  {
    "symbol": "ETHBTC",
    "bidPrice": "0.07946700",
    "bidQty": "9.00000000",
    "askPrice": "100000.00000000",
    "askQty": "1000.00000000"
  }
]

```

**Raises** BinanceRequestException, BinanceAPIException

#### **get\_products ()**

Return list of products currently listed on Binance

Use get\_exchange\_info() call instead

**Returns** list - List of product dictionaries

**Raises** BinanceRequestException, BinanceAPIException

#### **get\_recent\_trades (\*\*params)**

Get recent trades (up to last 500).

<https://github.com/binance/binance-spot-api-docs/blob/master/rest-api.md#recent-trades-list>

#### **Parameters**

- **symbol** (*str*) – required
- **limit** (*int*) – Default 500; max 500.

**Returns** API response

```
[
  {
    "id": 28457,
    "price": "4.00000100",
    "qty": "12.00000000",
    "time": 1499865549590,
    "isBuyerMaker": true,
    "isBestMatch": true
  }
]
```

**Raises** `BinanceRequestException`, `BinanceAPIException`

#### `get_server_time()`

Test connectivity to the Rest API and get the current server time.

<https://github.com/binance/binance-spot-api-docs/blob/master/rest-api.md#check-server-time>

**Returns** Current server time

```
{
  "serverTime": 1499827319559
}
```

**Raises** `BinanceRequestException`, `BinanceAPIException`

#### `get_sub_account_assets(**params)`

Fetch sub-account assets

<https://binance-docs.github.io/apidocs/spot/en/#query-sub-account-assets-for-master-account>

#### Parameters

- **email** (*str*) – required
- **symbol** (*str*) – optional
- **recvWindow** (*int*) – optional

**Returns** API response

```
{
  "success": true,
  "balances": [
    {
      "asset": "ADA",
      "free": 10000,
      "locked": 0
    },
    {
      "asset": "BNB",
      "free": 10003,
      "locked": 0
    },
    {
      "asset": "BTC",
      "free": 11467.6399,
      "locked": 0
    }
  ]
}
```

(continues on next page)

(continued from previous page)

```

    },
    {
        "asset": "ETH",
        "free": 10004.995,
        "locked": 0
    },
    {
        "asset": "USDT",
        "free": 11652.14213,
        "locked": 0
    }
]
}

```

**Raises** `BinanceRequestException`, `BinanceAPIException`

**get\_sub\_account\_futures\_transfer\_history** (\*\*params)

Query Sub-account Futures Transfer History.

<https://binance-docs.github.io/apidocs/spot/en/#query-sub-account-futures-asset-transfer-history-for-master-account>

#### Parameters

- **email** (*str*) – required
- **futuresType** (*int*) – required
- **startTime** (*int*) – optional
- **endTime** (*int*) – optional
- **page** (*int*) – optional
- **limit** (*int*) – optional
- **recvWindow** (*int*) – optional

**Returns** API response

```

{
  "success": true,
  "futuresType": 2,
  "transfers": [
    {
      "from": "aaa@test.com",
      "to": "bbb@test.com",
      "asset": "BTC",
      "qty": "1",
      "time": 1544433328000
    },
    {
      "from": "bbb@test.com",
      "to": "ccc@test.com",
      "asset": "ETH",
      "qty": "2",
      "time": 1544433328000
    }
  ]
}

```

**Raises** BinanceRequestException, BinanceAPIException

**get\_sub\_account\_list** (\*\*params)

Query Sub-account List.

<https://binance-docs.github.io/apidocs/spot/en/#query-sub-account-list-for-master-account>

**Parameters**

- **email** (*str*) – optional
- **startTime** (*int*) – optional
- **endTime** (*int*) – optional
- **page** (*int*) – optional
- **limit** (*int*) – optional
- **recvWindow** (*int*) – optional

**Returns** API response

```
{
  "success": true,
  "subAccounts": [
    {
      "email": "123@test.com",
      "status": "enabled",
      "activated": true,
      "mobile": "91605290",
      "gAuth": true,
      "createTime": 1544433328000
    },
    {
      "email": "321@test.com",
      "status": "disabled",
      "activated": true,
      "mobile": "22501238",
      "gAuth": true,
      "createTime": 1544433328000
    }
  ]
}
```

**Raises** BinanceRequestException, BinanceAPIException

**get\_sub\_account\_transfer\_history** (\*\*params)

Query Sub-account Transfer History.

<https://binance-docs.github.io/apidocs/spot/en/#query-sub-account-spot-asset-transfer-history-for-master-account>

**Parameters**

- **email** (*str*) – required
- **startTime** (*int*) – optional
- **endTime** (*int*) – optional
- **page** (*int*) – optional
- **limit** (*int*) – optional

- **recvWindow** (*int*) – optional

**Returns** API response

```
{
  "success":true,
  "transfers":[
    {
      "from":"aaa@test.com",
      "to":"bbb@test.com",
      "asset":"BTC",
      "qty":"1",
      "time":1544433328000
    },
    {
      "from":"bbb@test.com",
      "to":"ccc@test.com",
      "asset":"ETH",
      "qty":"2",
      "time":1544433328000
    }
  ]
}
```

**Raises** BinanceRequestException, BinanceAPIException

**get\_subaccount\_deposit\_address** (*\*\*params*)

Get Sub-account Deposit Address (For Master Account)

<https://binance-docs.github.io/apidocs/spot/en/#get-sub-account-deposit-address-for-master-account>

**Parameters**

- **email** (*str*) – required - Sub account email
- **coin** (*str*) – required
- **network** (*str*) – optional
- **recvWindow** (*int*) – optional

**Returns** API response

```
{
  "address":"TDunhSa7jkTNuKrusUTU1MUHtqXoBPKETV",
  "coin":"USDT",
  "tag":"",
  "url":"https://tronscan.org/#/address/TDunhSa7jkTNuKrusUTU1MUHtqXoBPKETV"
}
```

**Raises** BinanceRequestException, BinanceAPIException

**get\_subaccount\_deposit\_history** (*\*\*params*)

Get Sub-account Deposit History (For Master Account)

<https://binance-docs.github.io/apidocs/spot/en/#get-sub-account-deposit-address-for-master-account>

**Parameters**

- **email** (*str*) – required - Sub account email

- **coin** (*str*) – optional
- **status** (*int*) – optional - (0:pending,6: credited but cannot withdraw, 1:success)
- **startTime** (*int*) – optional
- **endTime** (*int*) – optional
- **limit** (*int*) – optional
- **offset** (*int*) – optional - default:0
- **recvWindow** (*int*) – optional

**Returns** API response

```
[
  {
    "amount": "0.00999800",
    "coin": "PAXG",
    "network": "ETH",

  }
]
```

**Raises** `BinanceRequestException`, `BinanceAPIException`

**get\_subaccount\_futures\_details** (\*\**params*)

Get Detail on Sub-account's Futures Account (For Master Account)

<https://binance-docs.github.io/apidocs/spot/en/#get-detail-on-sub-account-39-s-futures-account-for-master-account>

**Parameters**

- **email** (*str*) – required - Sub account email
- **recvWindow** (*int*) – optional

**Returns** API response

```
{
  "email": "abc@test.com",
  "asset": "USDT",
  "assets": [
    {
      "asset": "USDT",
      "initialMargin": "0.00000000",

  "totalMaintenanceMargin": "0.00000000",
  "totalMarginBalance": "0.88308000",
  "totalOpenOrderInitialMargin": "0.00000000",
  "totalPositionInitialMargin": "0.00000000",
  "totalUnrealizedProfit": "0.00000000",
  "totalWalletBalance": "0.88308000",
  "updateTime": 1576756674610
}
```

**Raises** `BinanceRequestException`, `BinanceAPIException`

**get\_subaccount\_futures\_margin\_status** (*\*\*params*)

Get Sub-account's Status on Margin/Futures (For Master Account)

<https://binance-docs.github.io/apidocs/spot/en/#get-sub-account-39-s-status-on-margin-futures-for-master-account>

#### Parameters

- **email** (*str*) – optional - Sub account email
- **recvWindow** (*int*) – optional

**Returns** API response

```
[
  {
    "email": "123@test.com",           // user email
    "isSubUserEnabled": true,         // true or false
    "isUserActive": true,            // true or false
    "insertTime": 1570791523523      // sub account create time
    "isMarginEnabled": true,         // true or false for margin
    "isFutureEnabled": true          // true or false for futures.
    "mobile": 1570791523523         // user mobile number
  }
]
```

Raises `BinanceRequestException`, `BinanceAPIException`

`get_subaccount_futures_positionrisk (**params)`

Get Futures Position-Risk of Sub-account (For Master Account)

<https://binance-docs.github.io/apidocs/spot/en/#get-futures-position-risk-of-sub-account-for-master-account>

#### Parameters

- `email` (*str*) – required - Sub account email
- `recvWindow` (*int*) – optional

Returns API response

```
[
  {
    "entryPrice": "9975.12000",
    "leverage": "50",           // current initial leverage
    "maxNotional": "1000000", // notional value limit of current_
    ↪initial leverage
    "liquidationPrice": "7963.54",
    "markPrice": "9973.50770517",
    "positionAmount": "0.010",
    "symbol": "BTCUSDT",
    "unrealizedProfit": "-0.01612295"
  }
]
```

Raises `BinanceRequestException`, `BinanceAPIException`

`get_subaccount_futures_summary (**params)`

Get Summary of Sub-account's Futures Account (For Master Account)

<https://binance-docs.github.io/apidocs/spot/en/#get-summary-of-sub-account-39-s-futures-account-for-master-account>

Parameters `recvWindow` (*int*) – optional

Returns API response

```
{
  "totalInitialMargin": "9.83137400",
  "totalMaintenanceMargin": "0.41568700",
  "totalMarginBalance": "23.03235621",
  "totalOpenOrderInitialMargin": "9.00000000",
  "totalPositionInitialMargin": "0.83137400",
  "totalUnrealizedProfit": "0.03219710",

        "totalOpenOrderInitialMargin": "0.00000000",
        "totalPositionInitialMargin": "0.83137400",
        "totalUnrealizedProfit": "0.03219710",
        "totalWalletBalance": "0.87356177",
        "asset": "USDT"
    }
]
}

```

**Raises** `BinanceRequestException`, `BinanceAPIException`

`get_subaccount_margin_details` (\*\*params)

Get Detail on Sub-account's Margin Account (For Master Account)

<https://binance-docs.github.io/apidocs/spot/en/#get-detail-on-sub-account-39-s-margin-account-for-master-account>

#### Parameters

- **email** (*str*) – required - Sub account email
- **recvWindow** (*int*) – optional

**Returns** API response

```

{
    "email": "123@test.com",
    "marginLevel": "11.64405625",

        "locked": "0.00000000",
        "netAsset": "0.00000000"
    }
]
}

```

**Raises** `BinanceRequestException`, `BinanceAPIException`

**get\_subaccount\_margin\_summary** (*\*\*params*)

Get Summary of Sub-account's Margin Account (For Master Account)

<https://binance-docs.github.io/apidocs/spot/en/#get-summary-of-sub-account-39-s-margin-account-for-master-account>

**Parameters** `recvWindow` (*int*) – optional

**Returns** API response

```

{
  "totalAssetOfBtc": "4.33333333",
  "totalLiabilityOfBtc": "2.11111112",
  "totalNetAssetOfBtc": "2.22222221",
  "subAccountList": [
    {
      "email": "123@test.com",
      "totalAssetOfBtc": "2.11111111",
      "totalLiabilityOfBtc": "1.11111111",
      "totalNetAssetOfBtc": "1.00000000"
    },
    {
      "email": "345@test.com",
      "totalAssetOfBtc": "2.22222222",
      "totalLiabilityOfBtc": "1.00000001",
      "totalNetAssetOfBtc": "1.22222221"
    }
  ]
}

```

**Raises** `BinanceRequestException`, `BinanceAPIException`

**get\_subaccount\_transfer\_history** (*\*\*params*)

Sub-account Transfer History (For Sub-account)

<https://binance-docs.github.io/apidocs/spot/en/#transfer-to-master-for-sub-account>

### Parameters

- **asset** (*str*) – required - The asset being transferred, e.g., USDT
- **type** (*int*) – optional - 1: transfer in, 2: transfer out
- **startTime** (*int*) – optional
- **endTime** (*int*) – optional
- **limit** (*int*) – optional - Default 500
- **recvWindow** (*int*) – optional

### Returns API response

```
[
  {
    "counterParty": "master",
    "email": "master@test.com",
    "type": 1, // 1 for transfer in, 2 for transfer out
    "asset": "BTC",
    "qty": "1",
    "status": "SUCCESS",
    "tranId": 11798835829,
    "time": 1544433325000
  },
  {
    "counterParty": "subAccount",
    "email": "sub2@test.com",
    "type": 2,
    "asset": "ETH",
    "qty": "2",
    "status": "SUCCESS",
    "tranId": 11798829519,
    "time": 1544433326000
  }
]
```

**Raises** `BinanceRequestException`, `BinanceAPIException`

### `get_symbol_info` (*symbol*)

Return information about a symbol

**Parameters** **symbol** (*str*) – required e.g BNBBTC

**Returns** Dict if found, None if not

```
{
  "symbol": "ETHBTC",
  "status": "TRADING",
  "baseAsset": "ETH",
  "baseAssetPrecision": 8,
  "quoteAsset": "BTC",
  "quotePrecision": 8,
  "orderTypes": ["LIMIT", "MARKET"],
  "icebergAllowed": false,
  "filters": [
    {
```

(continues on next page)

(continued from previous page)

```

        "filterType": "PRICE_FILTER",
        "minPrice": "0.00000100",
        "maxPrice": "100000.00000000",
        "tickSize": "0.00000100"
    }, {
        "filterType": "LOT_SIZE",
        "minQty": "0.00100000",
        "maxQty": "100000.00000000",
        "stepSize": "0.00100000"
    }, {
        "filterType": "MIN_NOTIONAL",
        "minNotional": "0.00100000"
    }
]
}

```

**Raises** `BinanceRequestException`, `BinanceAPIException`

**get\_symbol\_ticker** (\*\*params)

Latest price for a symbol or symbols.

<https://github.com/binance/binance-spot-api-docs/blob/master/rest-api.md#24hr-ticker-price-change-statistics>

**Parameters** `symbol` (*str*) –

**Returns** API response

```

{
    "symbol": "LTCBTC",
    "price": "4.00000200"
}

```

OR

```

[
    {
        "symbol": "LTCBTC",
        "price": "4.00000200"
    },
    {
        "symbol": "ETHBTC",
        "price": "0.07946600"
    }
]

```

**Raises** `BinanceRequestException`, `BinanceAPIException`

**get\_system\_status** ()

Get system status detail.

<https://binance-docs.github.io/apidocs/spot/en/#system-status-system>

**Returns** API response

```
{
  "status": 0,          # 0: normal system maintenance
  "msg": "normal"      # normal or System maintenance.
}
```

### Raises `BinanceAPIException`

`get_ticker(**params)`

24 hour price change statistics.

<https://github.com/binance/binance-spot-api-docs/blob/master/rest-api.md#24hr-ticker-price-change-statistics>

24hr-ticker-price-change-statistics

**Parameters** `symbol` (*str*) –

**Returns** API response

```
{
  "priceChange": "-94.99999800",
  "priceChangePercent": "-95.960",
  "weightedAvgPrice": "0.29628482",
  "prevClosePrice": "0.10002000",
  "lastPrice": "4.00000200",
  "bidPrice": "4.00000000",
  "askPrice": "4.00000200",
  "openPrice": "99.00000000",
  "highPrice": "100.00000000",
  "lowPrice": "0.10000000",
  "volume": "8913.30000000",
  "openTime": 1499783499040,
  "closeTime": 1499869899040,
  "fristId": 28385,    # First tradeId
  "lastId": 28460,   # Last tradeId
  "count": 76        # Trade count
}
```

OR

```
[
  {
    "priceChange": "-94.99999800",
    "priceChangePercent": "-95.960",
    "weightedAvgPrice": "0.29628482",
    "prevClosePrice": "0.10002000",
    "lastPrice": "4.00000200",
    "bidPrice": "4.00000000",
    "askPrice": "4.00000200",
    "openPrice": "99.00000000",
    "highPrice": "100.00000000",
    "lowPrice": "0.10000000",
    "volume": "8913.30000000",

    "fristId": 28385,    # First tradeId
    "lastId": 28460,   # Last tradeId
    "count": 76        # Trade count
  }
]
```

**Raises** BinanceRequestException, BinanceAPIException

**get\_trade\_fee** (\*\*params)

Get trade fee.

[https://binance-docs.github.io/apidocs/spot/en/#trade-fee-user\\_data](https://binance-docs.github.io/apidocs/spot/en/#trade-fee-user_data)

**Parameters**

- **symbol** (*str*) – optional
- **recvWindow** (*int*) – the number of milliseconds the request is valid for

**Returns** API response

```
{
  "tradeFee": [
    {
      "symbol": "ADABNB",
      "maker": 0.9000,
      "taker": 1.0000
    }, {
      "symbol": "BNBBTC",
      "maker": 0.3000,
      "taker": 0.3000
    }
  ],
  "success": true
}
```

**Raises** BinanceWithdrawException

**get\_universal\_transfer\_history** (\*\*params)

Universal Transfer (For Master Account)

<https://binance-docs.github.io/apidocs/spot/en/#query-universal-transfer-history>

**Parameters**

- **fromEmail** (*str*) – optional
- **toEmail** (*str*) – optional
- **startTime** (*int*) – optional
- **endTime** (*int*) – optional
- **page** (*int*) – optional
- **limit** (*int*) – optional
- **recvWindow** (*int*) – optional

**Returns** API response

```
[
  {
    "tranId": 11945860693,
    "fromEmail": "master@test.com",
    "toEmail": "subaccount1@test.com",
    "asset": "BTC",
    "amount": "0.1",
  }
]
```

(continues on next page)

(continued from previous page)

```

    "fromAccountType": "SPOT",
    "toAccountType": "COIN_FUTURE",
    "status": "SUCCESS",
    "createTimeStamp": 1544433325000
  },
  {
    "tranId": 11945857955,
    "fromEmail": "master@test.com",
    "toEmail": "subaccount2@test.com",
    "asset": "ETH",
    "amount": "0.2",
    "fromAccountType": "SPOT",
    "toAccountType": "USDT_FUTURE",
    "status": "SUCCESS",
    "createTimeStamp": 1544433326000
  }
]

```

**Raises** `BinanceRequestException`, `BinanceAPIException`

**get\_withdraw\_history** (*\*\*params*)

Fetch withdraw history.

<https://www.binance.com/restapipub.html>

#### Parameters

- **asset** (*str*) – optional
- **startTime** (*long*) – optional
- **endTime** (*long*) – optional
- **recvWindow** (*int*) – the number of milliseconds the request is valid for

**Returns** API response

```

{
  "withdrawList": [
    {
      "amount": 1,
      "address": "0x6915f16f8791d0a1cc2bf47c13a6b2a92000504b",
      "asset": "ETH",
      "applyTime": 1508198532000
      "status": 4
    },
    {
      "amount": 0.005,
      "address": "0x6915f16f8791d0a1cc2bf47c13a6b2a92000504b",
      "txId":
      ↪ "0x80aaabed54bdab3f6de5868f89929a2371ad21d666f20f7393d1a3389fad95a1",
      "asset": "ETH",
      "applyTime": 1508198532000,
      "status": 4
    }
  ],
  "success": true
}

```

**Raises** BinanceRequestException, BinanceAPIException

**get\_withdraw\_history\_id** (*withdraw\_id*, *\*\*params*)

Fetch withdraw history.

<https://www.binance.com/restapipub.html> :param withdraw\_id: required :type withdraw\_id: str :param asset: optional :type asset: str :type status: 0(0:Email Sent,1:Cancelled 2:Awaiting Approval 3:Rejected 4:Processing 5:Failure 6:Completed) optional :type status: int :param startTime: optional :type startTime: long :param endTime: optional :type endTime: long :param recvWindow: the number of milliseconds the request is valid for :type recvWindow: int

**Returns** API response

```
{
  "amount": 1,
  "address": "0x6915f16f8791d0a1cc2bf47c13a6b2a92000504b",
  "asset": "ETH",
  "applyTime": 1508198532000
  "status": 4
}
```

**Raises** BinanceRequestException, BinanceAPIException

**isolated\_margin\_stream\_close** (*symbol*, *listenKey*)

Close out an isolated margin data stream.

<https://binance-docs.github.io/apidocs/spot/en/#listen-key-isolated-margin>

**Parameters**

- **symbol** (*str*) – required - symbol for the isolated margin account
- **listenKey** (*str*) – required

**Returns** API response

```
{}
```

**Raises** BinanceRequestException, BinanceAPIException

**isolated\_margin\_stream\_get\_listen\_key** (*symbol*)

Start a new isolated margin data stream and return the listen key If a stream already exists it should return the same key. If the stream becomes invalid a new key is returned.

Can be used to keep the stream alive.

<https://binance-docs.github.io/apidocs/spot/en/#listen-key-isolated-margin>

**Parameters** **symbol** (*str*) – required - symbol for the isolated margin account

**Returns** API response

```
{
  "listenKey":
  ↪ "T3ee22BIYuWqmvne0HNq2A2WsFlEtLhvWcTItw6ffhhdmjifQ2tRbuKkTHhr"
}
```

**Raises** BinanceRequestException, BinanceAPIException

**isolated\_margin\_stream\_keepalive** (*symbol*, *listenKey*)

PING an isolated margin data stream to prevent a time out.

<https://binance-docs.github.io/apidocs/spot/en/#listen-key-isolated-margin>

**Parameters**

- **symbol** (*str*) – required - symbol for the isolated margin account
- **listenKey** (*str*) – required

**Returns** API response

```
{}
```

**Raises** BinanceRequestException, BinanceAPIException

**make\_subaccount\_futures\_transfer** (\*\**params*)

Futures Transfer for Sub-account (For Master Account)

<https://binance-docs.github.io/apidocs/spot/en/#futures-transfer-for-sub-account-for-master-account>

**Parameters**

- **email** (*str*) – required - Sub account email
- **asset** (*str*) – required - The asset being transferred, e.g., USDT
- **amount** (*float*) – required - The amount to be transferred
- **type** (*int*) – required - 1: transfer from subaccount's spot account to its USDT-margined futures account 2: transfer from subaccount's USDT-margined futures account to its spot account 3: transfer from subaccount's spot account to its COIN-margined futures account 4: transfer from subaccount's COIN-margined futures account to its spot account

**Returns** API response

```
{
  "txnId": "2966662589"
}
```

**Raises** BinanceRequestException, BinanceAPIException

**make\_subaccount\_margin\_transfer** (\*\**params*)

Margin Transfer for Sub-account (For Master Account)

<https://binance-docs.github.io/apidocs/spot/en/#margin-transfer-for-sub-account-for-master-account>

**Parameters**

- **email** (*str*) – required - Sub account email
- **asset** (*str*) – required - The asset being transferred, e.g., USDT
- **amount** (*float*) – required - The amount to be transferred
- **type** (*int*) – required - 1: transfer from subaccount's spot account to margin account 2: transfer from subaccount's margin account to its spot account

**Returns** API response

```
{
  "txnId": "2966662589"
}
```

**Raises** BinanceRequestException, BinanceAPIException

**make\_subaccount\_to\_master\_transfer** (\*\*params)

Transfer to Master (For Sub-account)

<https://binance-docs.github.io/apidocs/spot/en/#transfer-to-master-for-sub-account>

**Parameters**

- **asset** (*str*) – required - The asset being transferred, e.g., USDT
- **amount** (*float*) – required - The amount to be transferred
- **recvWindow** (*int*) – optional

**Returns** API response

```
{
  "txnId": "2966662589"
}
```

**Raises** BinanceRequestException, BinanceAPIException

**make\_subaccount\_to\_subaccount\_transfer** (\*\*params)

Transfer to Sub-account of Same Master (For Sub-account)

<https://binance-docs.github.io/apidocs/spot/en/#transfer-to-sub-account-of-same-master-for-sub-account>

**Parameters**

- **toEmail** (*str*) – required - Sub account email
- **asset** (*str*) – required - The asset being transferred, e.g., USDT
- **amount** (*float*) – required - The amount to be transferred
- **recvWindow** (*int*) – optional

**Returns** API response

```
{
  "txnId": "2966662589"
}
```

**Raises** BinanceRequestException, BinanceAPIException

**make\_universal\_transfer** (\*\*params)

Universal Transfer (For Master Account)

<https://binance-docs.github.io/apidocs/spot/en/#universal-transfer-for-master-account>

**Parameters**

- **fromEmail** (*str*) – optional
- **toEmail** (*str*) – optional
- **fromAccountType** (*str*) – required

- **toAccountType** (*str*) – required
- **asset** (*str*) – required - The asset being transferred, e.g., USDT
- **amount** (*float*) – required
- **recvWindow** (*int*) – optional

**Returns** API response

```
{
  "tranId":11945860693
}
```

**Raises** BinanceRequestException, BinanceAPIException

**margin\_stream\_close** (*listenKey*)

Close out a cross-margin data stream.

<https://binance-docs.github.io/apidocs/spot/en/#listen-key-margin>

**Parameters** **listenKey** (*str*) – required

**Returns** API response

```
{}
```

**Raises** BinanceRequestException, BinanceAPIException

**margin\_stream\_get\_listen\_key** ()

Start a new cross-margin data stream and return the listen key If a stream already exists it should return the same key. If the stream becomes invalid a new key is returned.

Can be used to keep the stream alive.

<https://binance-docs.github.io/apidocs/spot/en/#listen-key-margin>

**Returns** API response

```
{
  "listenKey":
  →"pqia9lma19a5s6lcv6a81va65sdf19v8a65a1a5s6lcv6a81va65sdf19v8a65a1"
}
```

**Raises** BinanceRequestException, BinanceAPIException

**margin\_stream\_keepalive** (*listenKey*)

PING a cross-margin data stream to prevent a time out.

<https://binance-docs.github.io/apidocs/spot/en/#listen-key-margin>

**Parameters** **listenKey** (*str*) – required

**Returns** API response

```
{}
```

**Raises** BinanceRequestException, BinanceAPIException

**new\_transfer\_history** (\*\*params)

Get future account transaction history list

<https://binance-docs.github.io/apidocs/delivery/en/#new-future-account-transfer>

**options\_account\_info** (\*\*params)

Account asset info (USER\_DATA)

[https://binance-docs.github.io/apidocs/voptions/en/#account-asset-info-user\\_data](https://binance-docs.github.io/apidocs/voptions/en/#account-asset-info-user_data)

**Parameters** **recvWindow** (*int*) – optional

**options\_bill** (\*\*params)

Account funding flow (USER\_DATA)

[https://binance-docs.github.io/apidocs/voptions/en/#account-funding-flow-user\\_data](https://binance-docs.github.io/apidocs/voptions/en/#account-funding-flow-user_data)

**Parameters**

- **currency** (*str*) – required - Asset type - USDT
- **recordId** (*int*) – optional - Return the recordId and subsequent data, the latest data is returned by default - 100000
- **startTime** (*int*) – optional - Start Time - 1593511200000
- **endTime** (*int*) – optional - End Time - 1593511200000
- **limit** (*int*) – optional - Number of result sets returned Default:100 Max:1000 - 100
- **recvWindow** (*int*) – optional

**options\_cancel\_all\_orders** (\*\*params)

Cancel all Option orders (TRADE)

<https://binance-docs.github.io/apidocs/voptions/en/#cancel-all-option-orders-trade>

**Parameters**

- **symbol** (*str*) – required - Option trading pair - BTC-200730-9000-C
- **recvWindow** (*int*) – optional

**options\_cancel\_batch\_order** (\*\*params)

Cancel Multiple Option orders (TRADE)

<https://binance-docs.github.io/apidocs/voptions/en/#cancel-multiple-option-orders-trade>

**Parameters**

- **symbol** (*str*) – required - Option trading pair - BTC-200730-9000-C
- **orderIds** – optional - Order ID - [4611875134427365377,4611875134427365378]
- **clientOrderIds** (*list*) – optional - User-defined order ID - ["my\_id\_1","my\_id\_2"]
- **recvWindow** (*int*) – optional

**options\_cancel\_order** (\*\*params)

Cancel Option order (TRADE)

<https://binance-docs.github.io/apidocs/voptions/en/#cancel-option-order-trade>

**Parameters**

- **symbol** (*str*) – required - Option trading pair - BTC-200730-9000-C

- **orderId** (*str*) – optional - Order ID - 4611875134427365377
- **clientOrderId** (*str*) – optional - User-defined order ID - 10000
- **recvWindow** (*int*) – optional

**options\_exchange\_info** ()

Get current limit info and trading pair info

<https://binance-docs.github.io/apidocs/voptions/en/#get-current-limit-info-and-trading-pair-info>**options\_funds\_transfer** (\*\*params)

Funds transfer (USER\_DATA)

[https://binance-docs.github.io/apidocs/voptions/en/#funds-transfer-user\\_data](https://binance-docs.github.io/apidocs/voptions/en/#funds-transfer-user_data)**Parameters**

- **currency** (*str*) – required - Asset type - USDT
- **type** (*str* (ENUM)) – required - IN: Transfer from spot account to option account OUT: Transfer from option account to spot account - IN
- **amount** (*float*) – required - Amount - 10000
- **recvWindow** (*int*) – optional

**options\_historical\_trades** (\*\*params)

Query trade history

<https://binance-docs.github.io/apidocs/voptions/en/#query-trade-history>**Parameters**

- **symbol** (*str*) – required - Option trading pair - BTC-200730-9000-C
- **fromId** (*int*) – optional - The deal ID from which to return. The latest deal record is returned by default - 1592317127349
- **limit** (*int*) – optional - Number of records Default:100 Max:500 - 100

**options\_index\_price** (\*\*params)

Get the spot index price

<https://binance-docs.github.io/apidocs/voptions/en/#get-the-spot-index-price>**Parameters underlying** (*str*) – required - Spot pairOption contract underlying asset-BTCUSDT**options\_info** ()

Get current trading pair info

<https://binance-docs.github.io/apidocs/voptions/en/#get-current-trading-pair-info>**options\_klines** (\*\*params)

Candle data

<https://binance-docs.github.io/apidocs/voptions/en/#candle-data>**Parameters**

- **symbol** (*str*) – required - Option trading pair - BTC-200730-9000-C
- **interval** (*str*) – required - Time interval - 5m
- **startTime** (*int*) – optional - Start Time - 1592317127349
- **endTime** (*int*) – optional - End Time - 1592317127349

- **limit** (*int*) – optional - Number of records Default:500 Max:1500 - 500

**options\_mark\_price** (\*\**params*)

Get the latest mark price

<https://binance-docs.github.io/apidocs/voptions/en/#get-the-latest-mark-price>

**Parameters** **symbol** (*str*) – optional - Option trading pair - BTC-200730-9000-C

**options\_order\_book** (\*\**params*)

Depth information

<https://binance-docs.github.io/apidocs/voptions/en/#depth-information>

**Parameters**

- **symbol** (*str*) – required - Option trading pair - BTC-200730-9000-C
- **limit** (*int*) – optional - Default:100 Max:1000.Optional value:[10, 20, 50, 100, 500, 1000] - 100

**options\_ping** ()

Test connectivity

<https://binance-docs.github.io/apidocs/voptions/en/#test-connectivity>

**options\_place\_batch\_order** (\*\**params*)

Place Multiple Option orders (TRADE)

<https://binance-docs.github.io/apidocs/voptions/en/#place-multiple-option-orders-trade>

**Parameters**

- **orders** (*list*) – required - order list. Max 5 orders - [{"symbol": "BTC-210115-35000-C", "price": "100", "quantity": "0.0001", "side": "BUY", "type": "LIMIT"}]
- **recvWindow** (*int*) – optional

**options\_place\_order** (\*\**params*)

Option order (TRADE)

<https://binance-docs.github.io/apidocs/voptions/en/#option-order-trade>

**Parameters**

- **symbol** (*str*) – required - Option trading pair - BTC-200730-9000-C
- **side** (*str* (ENUM)) – required - Buy/sell direction: SELL, BUY - BUY
- **type** (*str* (ENUM)) – required - Order Type: LIMIT, MARKET - LIMIT
- **quantity** (*float*) – required - Order Quantity - 3
- **price** (*float*) – optional - Order Price - 1000
- **timeInForce** (*str* (ENUM)) – optional - Time in force method Default GTC - GTC
- **reduceOnly** (*bool*) – optional - Reduce Only (Default false) - false
- **postOnly** (*bool*) – optional - Post Only (Default false) - false
- **newOrderRespType** (*str* (ENUM)) – optional - “ACK”, “RESULT”, Default “ACK” - ACK
- **clientOrderId** (*str*) – optional - User-defined order ID cannot be repeated in pending orders - 10000

- **recvWindow** (*int*) – optional

**options\_positions** (\*\**params*)

Option holdings info (USER\_DATA)

[https://binance-docs.github.io/apidocs/voptions/en/#option-holdings-info-user\\_data](https://binance-docs.github.io/apidocs/voptions/en/#option-holdings-info-user_data)

#### Parameters

- **symbol** (*str*) – optional - Option trading pair - BTC-200730-9000-C
- **recvWindow** (*int*) – optional

**options\_price** (\*\**params*)

Get the latest price

<https://binance-docs.github.io/apidocs/voptions/en/#get-the-latest-price>

**Parameters** **symbol** (*str*) – optional - Option trading pair - BTC-200730-9000-C

**options\_query\_order** (\*\**params*)

Query Option order (TRADE)

<https://binance-docs.github.io/apidocs/voptions/en/#query-option-order-trade>

#### Parameters

- **symbol** (*str*) – required - Option trading pair - BTC-200730-9000-C
- **orderId** (*str*) – optional - Order ID - 4611875134427365377
- **clientOrderId** (*str*) – optional - User-defined order ID - 10000
- **recvWindow** (*int*) – optional

**options\_query\_order\_history** (\*\**params*)

Query Option order history (TRADE)

<https://binance-docs.github.io/apidocs/voptions/en/#query-option-order-history-trade>

#### Parameters

- **symbol** (*str*) – required - Option trading pair - BTC-200730-9000-C
- **orderId** (*str*) – optional - Returns the orderId and subsequent orders, the most recent order is returned by default - 100000
- **startTime** (*int*) – optional - Start Time - 1593511200000
- **endTime** (*int*) – optional - End Time - 1593511200000
- **limit** (*int*) – optional - Number of result sets returned Default:100 Max:1000 - 100
- **recvWindow** (*int*) – optional

**options\_query\_pending\_orders** (\*\**params*)

Query current pending Option orders (TRADE)

<https://binance-docs.github.io/apidocs/voptions/en/#query-current-pending-option-orders-trade>

#### Parameters

- **symbol** (*str*) – required - Option trading pair - BTC-200730-9000-C
- **orderId** (*str*) – optional - Returns the orderId and subsequent orders, the most recent order is returned by default - 100000
- **startTime** (*int*) – optional - Start Time - 1593511200000

- **endTime** (*int*) – optional - End Time - 1593511200000
- **limit** (*int*) – optional - Number of result sets returned Default:100 Max:1000 - 100
- **recvWindow** (*int*) – optional

**options\_recent\_trades** (\*\*params)

Recently completed Option trades

<https://binance-docs.github.io/apidocs/voptions/en/#recently-completed-option-trades>

#### Parameters

- **symbol** (*str*) – required - Option trading pair - BTC-200730-9000-C
- **limit** (*int*) – optional - Number of records Default:100 Max:500 - 100

**options\_time** ()

Get server time

<https://binance-docs.github.io/apidocs/voptions/en/#get-server-time>

**options\_user\_trades** (\*\*params)

Option Trade List (USER\_DATA)

[https://binance-docs.github.io/apidocs/voptions/en/#option-trade-list-user\\_data](https://binance-docs.github.io/apidocs/voptions/en/#option-trade-list-user_data)

#### Parameters

- **symbol** (*str*) – required - Option trading pair - BTC-200730-9000-C
- **fromId** – optional - Trade id to fetch from. Default gets most recent trades. - 4611875134427365376
- **startTime** (*int*) – optional - Start Time - 1593511200000
- **endTime** (*int*) – optional - End Time - 1593511200000
- **limit** (*int*) – optional - Number of result sets returned Default:100 Max:1000 - 100
- **recvWindow** (*int*) – optional

**order\_limit** (timeInForce='GTC', \*\*params)

Send in a new limit order

Any order with an icebergQty MUST have timeInForce set to GTC.

#### Parameters

- **symbol** (*str*) – required
- **side** (*str*) – required
- **quantity** (*decimal*) – required
- **price** (*str*) – required
- **timeInForce** (*str*) – default Good till cancelled
- **newClientOrderId** (*str*) – A unique id for the order. Automatically generated if not sent.
- **icebergQty** (*decimal*) – Used with LIMIT, STOP\_LOSS\_LIMIT, and TAKE\_PROFIT\_LIMIT to create an iceberg order.

- **newOrderRespType** (*str*) – Set the response JSON. ACK, RESULT, or FULL; default: RESULT.
- **recvWindow** (*int*) – the number of milliseconds the request is valid for

**Returns** API response

See order endpoint for full response options

**Raises** BinanceRequestException, BinanceAPIException, BinanceOrderException, BinanceOrderMinAmountException, BinanceOrderMinPriceException, BinanceOrderMinTotalException, BinanceOrderUnknownSymbolException, BinanceOrderInactiveSymbolException

**order\_limit\_buy** (*timeInForce='GTC', \*\*params*)

Send in a new limit buy order

Any order with an icebergQty MUST have timeInForce set to GTC.

**Parameters**

- **symbol** (*str*) – required
- **quantity** (*decimal*) – required
- **price** (*str*) – required
- **timeInForce** (*str*) – default Good till cancelled
- **newClientOrderId** (*str*) – A unique id for the order. Automatically generated if not sent.
- **stopPrice** (*decimal*) – Used with stop orders
- **icebergQty** (*decimal*) – Used with iceberg orders
- **newOrderRespType** (*str*) – Set the response JSON. ACK, RESULT, or FULL; default: RESULT.
- **recvWindow** (*int*) – the number of milliseconds the request is valid for

**Returns** API response

See order endpoint for full response options

**Raises** BinanceRequestException, BinanceAPIException, BinanceOrderException, BinanceOrderMinAmountException, BinanceOrderMinPriceException, BinanceOrderMinTotalException, BinanceOrderUnknownSymbolException, BinanceOrderInactiveSymbolException

**order\_limit\_sell** (*timeInForce='GTC', \*\*params*)

Send in a new limit sell order

**Parameters**

- **symbol** (*str*) – required
- **quantity** (*decimal*) – required
- **price** (*str*) – required
- **timeInForce** (*str*) – default Good till cancelled
- **newClientOrderId** (*str*) – A unique id for the order. Automatically generated if not sent.
- **stopPrice** (*decimal*) – Used with stop orders

- **icebergQty** (*decimal*) – Used with iceberg orders
- **newOrderRespType** (*str*) – Set the response JSON. ACK, RESULT, or FULL; default: RESULT.
- **recvWindow** (*int*) – the number of milliseconds the request is valid for

**Returns** API response

See order endpoint for full response options

**Raises** `BinanceRequestException`, `BinanceAPIException`, `BinanceOrderException`, `BinanceOrderMinAmountException`, `BinanceOrderMinPriceException`, `BinanceOrderMinTotalException`, `BinanceOrderUnknownSymbolException`, `BinanceOrderInactiveSymbolException`

**order\_market** (*\*\*params*)

Send in a new market order

#### Parameters

- **symbol** (*str*) – required
- **side** (*str*) – required
- **quantity** (*decimal*) – required
- **quoteOrderQty** (*decimal*) – amount the user wants to spend (when buying) or receive (when selling) of the quote asset
- **newClientOrderId** (*str*) – A unique id for the order. Automatically generated if not sent.
- **newOrderRespType** (*str*) – Set the response JSON. ACK, RESULT, or FULL; default: RESULT.
- **recvWindow** (*int*) – the number of milliseconds the request is valid for

**Returns** API response

See order endpoint for full response options

**Raises** `BinanceRequestException`, `BinanceAPIException`, `BinanceOrderException`, `BinanceOrderMinAmountException`, `BinanceOrderMinPriceException`, `BinanceOrderMinTotalException`, `BinanceOrderUnknownSymbolException`, `BinanceOrderInactiveSymbolException`

**order\_market\_buy** (*\*\*params*)

Send in a new market buy order

#### Parameters

- **symbol** (*str*) – required
- **quantity** (*decimal*) – required
- **quoteOrderQty** (*decimal*) – the amount the user wants to spend of the quote asset
- **newClientOrderId** (*str*) – A unique id for the order. Automatically generated if not sent.
- **newOrderRespType** (*str*) – Set the response JSON. ACK, RESULT, or FULL; default: RESULT.
- **recvWindow** (*int*) – the number of milliseconds the request is valid for

**Returns** API response

See order endpoint for full response options

**Raises** `BinanceRequestException`, `BinanceAPIException`, `BinanceOrderException`, `BinanceOrderMinAmountException`, `BinanceOrderMinPriceException`, `BinanceOrderMinTotalException`, `BinanceOrderUnknownSymbolException`, `BinanceOrderInactiveSymbolException`

**order\_market\_sell** (\*\*params)

Send in a new market sell order

**Parameters**

- **symbol** (*str*) – required
- **quantity** (*decimal*) – required
- **quoteOrderQty** (*decimal*) – the amount the user wants to receive of the quote asset
- **newClientOrderId** (*str*) – A unique id for the order. Automatically generated if not sent.
- **newOrderRespType** (*str*) – Set the response JSON. ACK, RESULT, or FULL; default: RESULT.
- **recvWindow** (*int*) – the number of milliseconds the request is valid for

**Returns** API response

See order endpoint for full response options

**Raises** `BinanceRequestException`, `BinanceAPIException`, `BinanceOrderException`, `BinanceOrderMinAmountException`, `BinanceOrderMinPriceException`, `BinanceOrderMinTotalException`, `BinanceOrderUnknownSymbolException`, `BinanceOrderInactiveSymbolException`

**order\_oco\_buy** (\*\*params)

Send in a new OCO buy order

**Parameters**

- **symbol** (*str*) – required
- **listClientOrderId** (*str*) – A unique id for the list order. Automatically generated if not sent.
- **quantity** (*decimal*) – required
- **limitClientOrderId** (*str*) – A unique id for the limit order. Automatically generated if not sent.
- **price** (*str*) – required
- **limitIcebergQty** (*decimal*) – Used to make the LIMIT\_MAKER leg an iceberg order.
- **stopClientOrderId** (*str*) – A unique id for the stop order. Automatically generated if not sent.
- **stopPrice** (*str*) – required
- **stopLimitPrice** (*str*) – If provided, `stopLimitTimeInForce` is required.

- **stopIcebergQty** (*decimal*) – Used with STOP\_LOSS\_LIMIT leg to make an iceberg order.
- **stopLimitTimeInForce** (*str*) – Valid values are GTC/FOK/IOC.
- **newOrderRespType** (*str*) – Set the response JSON. ACK, RESULT, or FULL; default: RESULT.
- **recvWindow** (*int*) – the number of milliseconds the request is valid for

**Returns** API response

See OCO order endpoint for full response options

**Raises** BinanceRequestException, BinanceAPIException, BinanceOrderException, BinanceOrderMinAmountException, BinanceOrderMinPriceException, BinanceOrderMinTotalException, BinanceOrderUnknownSymbolException, BinanceOrderInactiveSymbolException

**order\_oco\_sell** (\*\**params*)

Send in a new OCO sell order

**Parameters**

- **symbol** (*str*) – required
- **listClientOrderId** (*str*) – A unique id for the list order. Automatically generated if not sent.
- **quantity** (*decimal*) – required
- **limitClientOrderId** (*str*) – A unique id for the limit order. Automatically generated if not sent.
- **price** (*str*) – required
- **limitIcebergQty** (*decimal*) – Used to make the LIMIT\_MAKER leg an iceberg order.
- **stopClientOrderId** (*str*) – A unique id for the stop order. Automatically generated if not sent.
- **stopPrice** (*str*) – required
- **stopLimitPrice** (*str*) – If provided, stopLimitTimeInForce is required.
- **stopIcebergQty** (*decimal*) – Used with STOP\_LOSS\_LIMIT leg to make an iceberg order.
- **stopLimitTimeInForce** (*str*) – Valid values are GTC/FOK/IOC.
- **newOrderRespType** (*str*) – Set the response JSON. ACK, RESULT, or FULL; default: RESULT.
- **recvWindow** (*int*) – the number of milliseconds the request is valid for

**Returns** API response

See OCO order endpoint for full response options

**Raises** BinanceRequestException, BinanceAPIException, BinanceOrderException, BinanceOrderMinAmountException, BinanceOrderMinPriceException, BinanceOrderMinTotalException, BinanceOrderUnknownSymbolException, BinanceOrderInactiveSymbolException

**ping()**

Test connectivity to the Rest API.

<https://github.com/binance/binance-spot-api-docs/blob/master/rest-api.md#test-connectivity>

**Returns** Empty array

```
{}
```

**Raises** `BinanceRequestException`, `BinanceAPIException`

**purchase\_lending\_product (\*\*params)**

Purchase Flexible Product

[https://binance-docs.github.io/apidocs/spot/en/#purchase-flexible-product-user\\_data](https://binance-docs.github.io/apidocs/spot/en/#purchase-flexible-product-user_data)

**query\_subaccount\_spot\_summary (\*\*params)**

Query Sub-account Spot Assets Summary (For Master Account)

<https://binance-docs.github.io/apidocs/spot/en/#query-sub-account-spot-assets-summary-for-master-account>

**Parameters**

- **email** (*str*) – optional - Sub account email
- **page** (*int*) – optional - default 1
- **size** (*int*) – optional - default 10, max 20
- **recvWindow** (*int*) – optional

**Returns** API response

```
{
  "totalCount":2,
  "masterAccountTotalAsset": "0.23231201",
  "spotSubUserAssetBtcVoList":[
    {
      "email":"sub123@test.com",
      "totalAsset":"9999.00000000"
    },
    {
      "email":"test456@test.com",
      "totalAsset":"0.00000000"
    }
  ]
}
```

**Raises** `BinanceRequestException`, `BinanceAPIException`

**query\_universal\_transfer\_history (\*\*params)**

Query User Universal Transfer History

<https://binance-docs.github.io/apidocs/spot/en/#query-user-universal-transfer-history>

**Parameters**

- **type** (*str* (*ENUM*)) – required
- **startTime** (*int*) – optional
- **endTime** (*int*) – optional

- **current** (*int*) – optional - Default 1
- **size** (*int*) – required - Default 10, Max 100
- **recvWindow** (*int*) – the number of milliseconds the request is valid for

```
transfer_status = client.query_universal_transfer_history(params)
```

**Returns** API response

```
{
  "total":2,
  "rows":[
    {
      "asset":"USDT",
      "amount":"1",
      "type":"MAIN_UMFUTURE"
      "status": "CONFIRMED",
      "tranId": 11415955596,
      "timestamp":1544433328000
    },
    {
      "asset":"USDT",
      "amount":"2",
      "type":"MAIN_UMFUTURE",
      "status": "CONFIRMED",
      "tranId": 11366865406,
      "timestamp":1544433328000
    }
  ]
}
```

**Raises** BinanceRequestException, BinanceAPIException

**redeem\_lending\_product** (\*\*params)

Redeem Flexible Product

[https://binance-docs.github.io/apidocs/spot/en/#redeem-flexible-product-user\\_data](https://binance-docs.github.io/apidocs/spot/en/#redeem-flexible-product-user_data)

**repay\_margin\_loan** (\*\*params)

Repay loan in cross-margin or isolated-margin account.

If amount is more than the amount borrowed, the full loan will be repaid.

<https://binance-docs.github.io/apidocs/spot/en/#margin-account-repay-margin>

**Parameters**

- **asset** (*str*) – name of the asset
- **amount** (*str*) – amount to transfer
- **isIsolated** (*str*) – set to ‘TRUE’ for isolated margin (default ‘FALSE’)
- **symbol** (*str*) – Isolated margin symbol (default blank for cross-margin)
- **recvWindow** (*int*) – the number of milliseconds the request is valid for

```
transaction = client.margin_repay_loan(asset='BTC', amount='1.1')

transaction = client.margin_repay_loan(asset='BTC', amount='1.1',
                                      isIsolated='TRUE', symbol='ETHBTC')
```

**Returns** API response

```
{
  "tranId": 100000001
}
```

**Raises** BinanceRequestException, BinanceAPIException

**stream\_close** (*listenKey*)

Close out a user data stream.

[https://github.com/binance/binance-spot-api-docs/blob/master/rest-api.md#close-user-data-stream-user\\_stream](https://github.com/binance/binance-spot-api-docs/blob/master/rest-api.md#close-user-data-stream-user_stream)

**Parameters** **listenKey** (*str*) – required

**Returns** API response

```
{}
```

**Raises** BinanceRequestException, BinanceAPIException

**stream\_get\_listen\_key** ()

Start a new user data stream and return the listen key. If a stream already exists it should return the same key. If the stream becomes invalid a new key is returned.

Can be used to keep the user stream alive.

[https://github.com/binance/binance-spot-api-docs/blob/master/rest-api.md#start-user-data-stream-user\\_stream](https://github.com/binance/binance-spot-api-docs/blob/master/rest-api.md#start-user-data-stream-user_stream)

**Returns** API response

```
{
  "listenKey":
  →"pqia91ma19a5s61cv6a81va65sdf19v8a65a1a5s61cv6a81va65sdf19v8a65a1"
}
```

**Raises** BinanceRequestException, BinanceAPIException

**stream\_keepalive** (*listenKey*)

PING a user data stream to prevent a time out.

[https://github.com/binance/binance-spot-api-docs/blob/master/rest-api.md#keepalive-user-data-stream-user\\_stream](https://github.com/binance/binance-spot-api-docs/blob/master/rest-api.md#keepalive-user-data-stream-user_stream)

**Parameters** **listenKey** (*str*) – required

**Returns** API response

```
{}
```

**Raises** BinanceRequestException, BinanceAPIException

**toggle\_bnb\_burn\_spot\_margin** (\*\*params)

Toggle BNB Burn On Spot Trade And Margin Interest

[https://binance-docs.github.io/apidocs/spot/en/#toggle-bnb-burn-on-spot-trade-and-margin-interest-user\\_data](https://binance-docs.github.io/apidocs/spot/en/#toggle-bnb-burn-on-spot-trade-and-margin-interest-user_data)

**Parameters**

- **spotBNBBurn** (*bool*) – Determines whether to use BNB to pay for trading fees on SPOT
- **interestBNBBurn** (*bool*) – Determines whether to use BNB to pay for margin loan’s interest

```
response = client.toggle_bnb_burn_spot_margin()
```

**Returns** API response

```
{
  "spotBNBBurn": true,
  "interestBNBBurn": false
}
```

**Raises** BinanceRequestException, BinanceAPIException

**transfer\_dust** (\*\*params)

Convert dust assets to BNB.

[https://binance-docs.github.io/apidocs/spot/en/#dust-transfer-user\\_data](https://binance-docs.github.io/apidocs/spot/en/#dust-transfer-user_data)

**Parameters**

- **asset** (*str*) – The asset being converted. e.g: ‘ONE’
- **recvWindow** (*int*) – the number of milliseconds the request is valid for

```
result = client.transfer_dust(asset='ONE')
```

**Returns** API response

```
{
  "totalServiceCharge": "0.02102542",
  "totalTransferred": "1.05127099",
  "transferResult": [
    {
      "amount": "0.03000000",
      "fromAsset": "ETH",
      "operateTime": 1563368549307,
      "serviceChargeAmount": "0.00500000",
      "tranId": 2970932918,
      "transferredAmount": "0.25000000"
    }
  ]
}
```

**Raises** BinanceRequestException, BinanceAPIException

**transfer\_history** (\*\*params)

Get future account transaction history list

[https://binance-docs.github.io/apidocs/futures/en/#get-future-account-transaction-history-list-user\\_data](https://binance-docs.github.io/apidocs/futures/en/#get-future-account-transaction-history-list-user_data)

**transfer\_isolated\_margin\_to\_spot** (\*\*params)

Execute transfer between isolated margin account and spot account.

<https://binance-docs.github.io/apidocs/spot/en/#isolated-margin-account-transfer-margin>

#### Parameters

- **asset** (*str*) – name of the asset
- **symbol** (*str*) – pair symbol
- **amount** (*str*) – amount to transfer
- **recvWindow** (*int*) – the number of milliseconds the request is valid for

```
transfer = client.transfer_isolated_margin_to_spot(asset='BTC',
                                                  symbol='ETHBTC', amount=
↳ '1.1')
```

**Returns** API response

```
{
  "tranId": 100000001
}
```

**Raises** BinanceRequestException, BinanceAPIException

**transfer\_margin\_to\_spot** (\*\*params)

Execute transfer between cross-margin account and spot account.

<https://binance-docs.github.io/apidocs/spot/en/#cross-margin-account-transfer-margin>

#### Parameters

- **asset** (*str*) – name of the asset
- **amount** (*str*) – amount to transfer
- **recvWindow** (*int*) – the number of milliseconds the request is valid for

```
transfer = client.transfer_margin_to_spot(asset='BTC', amount='1.1')
```

**Returns** API response

```
{
  "tranId": 100000001
}
```

**Raises** BinanceRequestException, BinanceAPIException

**transfer\_spot\_to\_isolated\_margin** (\*\*params)

Execute transfer between spot account and isolated margin account.

<https://binance-docs.github.io/apidocs/spot/en/#isolated-margin-account-transfer-margin>

**Parameters**

- **asset** (*str*) – name of the asset
- **symbol** (*str*) – pair symbol
- **amount** (*str*) – amount to transfer
- **recvWindow** (*int*) – the number of milliseconds the request is valid for

```
transfer = client.transfer_spot_to_isolated_margin(asset='BTC',  
                                                  symbol='ETHBTC', amount=  
→ '1.1')
```

**Returns** API response

```
{  
  "tranId": 100000001  
}
```

**Raises** BinanceRequestException, BinanceAPIException

**transfer\_spot\_to\_margin** (\*\*params)

Execute transfer between spot account and cross-margin account.

<https://binance-docs.github.io/apidocs/spot/en/#cross-margin-account-transfer-margin>

**Parameters**

- **asset** (*str*) – name of the asset
- **amount** (*str*) – amount to transfer
- **recvWindow** (*int*) – the number of milliseconds the request is valid for

```
transfer = client.transfer_spot_to_margin(asset='BTC', amount='1.1')
```

**Returns** API response

```
{  
  "tranId": 100000001  
}
```

**Raises** BinanceRequestException, BinanceAPIException

**universal\_transfer** (\*\*params)

Universal transfer api accross different binance account types

<https://binance-docs.github.io/apidocs/spot/en/#user-universal-transfer>

**withdraw** (\*\*params)

Submit a withdraw request.

<https://www.binance.com/restapipub.html>

Assumptions:

- You must have Withdraw permissions enabled on your API key
- You must have withdrawn to the address specified through the website and approved the transaction via email

#### Parameters

- **asset** (*str*) – required
- **amount** (*decimal*) – required
- **name** (*str*) – optional - Description of the address, default asset value passed will be used
- **recvWindow** (*int*) – the number of milliseconds the request is valid for

**Returns** API response

```
{
  "msg": "success",
  "success": true,
  "id": "7213fea8e94b4a5593d507237e5a555b"
}
```

**Raises** BinanceRequestException, BinanceAPIException, BinanceWithdrawException

## depthcache module

**class** binance.depthcache.**BaseDepthCacheManager** (*client, symbol, callback=None, refresh\_interval=None, bm=None, limit=10*)

Bases: object

**DEFAULT\_REFRESH** = 1800

**\_\_init\_\_** (*client, symbol, callback=None, refresh\_interval=None, bm=None, limit=10*)  
Initialise the DepthCacheManager

#### Parameters

- **client** (*binance.Client*) – Binance API client
- **symbol** (*string*) – Symbol to create depth cache for
- **callback** (*function*) – Optional function to receive depth cache updates
- **refresh\_interval** (*int*) – Optional number of seconds between cache refresh, use 0 or None to disable
- **limit** (*int*) – Optional number of orders to get from orderbook

**close** (*close\_socket=False*)  
Close the open socket for this manager

#### Returns

**get\_depth\_cache** ()  
Get the current depth cache

**Returns** DepthCache object

**get\_symbol()**

Get the symbol

**Returns** symbol

**class** binance.depthcache.DepthCache(*symbol*)

Bases: object

**\_\_init\_\_**(*symbol*)

Initialise the DepthCache

**Parameters** *symbol* (*string*) – Symbol to create depth cache for

**add\_ask**(*ask*)

Add an ask to the cache

**Parameters** *ask* –

**Returns**

**add\_bid**(*bid*)

Add a bid to the cache

**Parameters** *bid* –

**Returns**

**get\_asks**()

Get the current asks

**Returns** list of asks with price and quantity as floats

```
[
  [
    0.0001955, # Price
    57.0'      # Quantity
  ],
  [
    0.00019699,
    778.0
  ],
  [
    0.000197,
    64.0
  ],
  [
    0.00019709,
    1130.0
  ],
  [
    0.0001971,
    385.0
  ]
]
```

**get\_bids**()

Get the current bids

**Returns** list of bids with price and quantity as floats

```
[
  [

```

(continues on next page)

(continued from previous page)

```

        0.0001946, # Price
        45.0      # Quantity
    ],
    [
        0.00019459,
        2384.0
    ],
    [
        0.00019158,
        5219.0
    ],
    [
        0.00019157,
        1180.0
    ],
    [
        0.00019082,
        287.0
    ]
]

```

**static sort\_depth** (*vals*, *reverse=False*)  
Sort bids or asks by price

**class** `binance.depthcache.DepthCacheManager` (*client*, *symbol*, *callback=None*, *refresh\_interval=None*, *bm=None*, *limit=500*, *ws\_interval=None*)

Bases: `binance.depthcache.BaseDepthCacheManager`

**\_\_init\_\_** (*client*, *symbol*, *callback=None*, *refresh\_interval=None*, *bm=None*, *limit=500*, *ws\_interval=None*)  
Initialise the DepthCacheManager

#### Parameters

- **client** (`binance.Client`) – Binance API client
- **symbol** (`string`) – Symbol to create depth cache for
- **callback** (`function`) – Optional function to receive depth cache updates
- **refresh\_interval** (`int`) – Optional number of seconds between cache refresh, use 0 or None to disable
- **limit** (`int`) – Optional number of orders to get from orderbook
- **ws\_interval** (`int`) – Optional interval for updates on websocket, default None. If not set, updates happen every second. Must be 0, None (1s) or 100 (100ms).

**class** `binance.depthcache.OptionsDepthCacheManager` (*client*, *symbol*, *callback=None*, *refresh\_interval=None*, *bm=None*, *limit=10*)

Bases: `binance.depthcache.BaseDepthCacheManager`

## exceptions module

**exception** `binance.exceptions.BinanceAPIException` (*response*)  
Bases: `exceptions.Exception`

`__init__(response)`  
x.`__init__(...)` initializes x; see `help(type(x))` for signature

**exception** `binance.exceptions.BinanceOrderException` (*code, message*)

Bases: `exceptions.Exception`

`__init__(code, message)`  
x.`__init__(...)` initializes x; see `help(type(x))` for signature

**exception** `binance.exceptions.BinanceOrderInactiveSymbolException` (*value*)

Bases: `binance.exceptions.BinanceOrderException`

`__init__(value)`  
x.`__init__(...)` initializes x; see `help(type(x))` for signature

**exception** `binance.exceptions.BinanceOrderMinAmountException` (*value*)

Bases: `binance.exceptions.BinanceOrderException`

`__init__(value)`  
x.`__init__(...)` initializes x; see `help(type(x))` for signature

**exception** `binance.exceptions.BinanceOrderMinPriceException` (*value*)

Bases: `binance.exceptions.BinanceOrderException`

`__init__(value)`  
x.`__init__(...)` initializes x; see `help(type(x))` for signature

**exception** `binance.exceptions.BinanceOrderMinTotalException` (*value*)

Bases: `binance.exceptions.BinanceOrderException`

`__init__(value)`  
x.`__init__(...)` initializes x; see `help(type(x))` for signature

**exception** `binance.exceptions.BinanceOrderUnknownSymbolException` (*value*)

Bases: `binance.exceptions.BinanceOrderException`

`__init__(value)`  
x.`__init__(...)` initializes x; see `help(type(x))` for signature

**exception** `binance.exceptions.BinanceRequestException` (*message*)

Bases: `exceptions.Exception`

`__init__(message)`  
x.`__init__(...)` initializes x; see `help(type(x))` for signature

**exception** `binance.exceptions.BinanceWithdrawException` (*message*)

Bases: `exceptions.Exception`

`__init__(message)`  
x.`__init__(...)` initializes x; see `help(type(x))` for signature

## helpers module

`binance.helpers.date_to_milliseconds` (*date\_str*)

Convert UTC date to milliseconds

If using offset strings add “UTC” to date string e.g. “now UTC”, “11 hours ago UTC”

See `dateparse` docs for formats <http://dateparser.readthedocs.io/en/latest/>

**Parameters** `date_str` (*str*) – date in readable format, i.e. “January 01, 2018”, “11 hours ago UTC”, “now UTC”

`binance.helpers.interval_to_milliseconds` (*interval*)

Convert a Binance interval string to milliseconds

**Parameters** `interval` (*str*) – Binance interval string, e.g.: 1m, 3m, 5m, 15m, 30m, 1h, 2h, 4h, 6h, 8h, 12h, 1d, 3d, 1w

**Returns** int value of interval in milliseconds None if interval prefix is not a decimal integer None if interval suffix is not one of m, h, d, w

## websockets module

**class** `binance.websockets.BinanceClientFactory` (*\*args, \*\*kwargs*)

Bases: `autobahn.twisted.websocket.WebSocketClientFactory`, `binance.websockets.BinanceReconnectingClientFactory`

**clientConnectionFailed** (*connector, reason*)

Called when a connection has failed to connect.

It may be useful to call `connector.connect()` - this will reconnect.

@type reason: L{twisted.python.failure.Failure}

**clientConnectionLost** (*connector, reason*)

Called when an established connection is lost.

It may be useful to call `connector.connect()` - this will reconnect.

@type reason: L{twisted.python.failure.Failure}

**protocol**

alias of `BinanceClientProtocol`

**class** `binance.websockets.BinanceClientProtocol`

Bases: `autobahn.twisted.websocket.WebSocketClientProtocol`

**\_\_init\_\_** ()

x.\_\_init\_\_(...) initializes x; see `help(type(x))` for signature

**onConnect** (*response*)

Callback fired directly after WebSocket opening handshake when new WebSocket server connection was established.

**Parameters** `response` (instance of `autobahn.websocket.protocol.ConnectionResponse`) – WebSocket connection response information.

**onMessage** (*payload, isBinary*)

Implements `autobahn.websocket.interfaces.IWebSocketChannel.onMessage()`

**class** `binance.websockets.BinanceReconnectingClientFactory`

Bases: `twisted.internet.protocol.ReconnectingClientFactory`

**initialDelay** = 0.1

**maxDelay** = 10

**maxRetries** = 5

**class** `binance.websockets.BinanceSocketManager` (*client, user\_timeout=1800*)

Bases: `threading.Thread`

**DEFAULT\_USER\_TIMEOUT** = 1800

**FSTREAM\_URL** = 'wss://fstream.binance.com/'

**STREAM\_URL** = 'wss://stream.binance.com:9443/'

```
VSTREAM_TESTNET_URL = 'wss://testnetws.binanceops.com/'
```

```
VSTREAM_URL = 'wss://vstream.binance.com/'
```

```
WEBSOCKET_DEPTH_10 = '10'
```

```
WEBSOCKET_DEPTH_20 = '20'
```

```
WEBSOCKET_DEPTH_5 = '5'
```

```
__init__(client, user_timeout=1800)
    Initialise the BinanceSocketManager
```

#### Parameters

- **client** (*binance.Client*) – Binance API client
- **user\_timeout** (*int*) – Custom websocket timeout

```
close()
    Close all connections
```

```
run()
    Method representing the thread's activity.
```

You may override this method in a subclass. The standard run() method invokes the callable object passed to the object's constructor as the target argument, if any, with sequential and keyword arguments taken from the args and kwargs arguments, respectively.

```
start_aggtrade_futures_socket(symbol, callback)
    Start a websocket for aggregate symbol trade data for the futures stream
```

#### Parameters

- **symbol** (*str*) – required
- **callback** (*function*) – callback function to handle messages

**Returns** connection key string if successful, False otherwise

Message Format

```
{
  "e": "aggTrade", // Event type
  "E": 123456789, // Event time
  "s": "BTCUSDT", // Symbol
  "a": 5933014, // Aggregate trade ID
  "p": "0.001", // Price
  "q": "100", // Quantity
  "f": 100, // First trade ID
  "l": 105, // Last trade ID
  "T": 123456785, // Trade time
  "m": true, // Is the buyer the market maker?
}
```

```
start_aggtrade_socket(symbol, callback)
    Start a websocket for symbol trade data
```

<https://github.com/binance-exchange/binance-official-api-docs/blob/master/web-socket-streams.md#aggregate-trade-streams>

#### Parameters

- **symbol** (*str*) – required
- **callback** (*function*) – callback function to handle messages

**Returns** connection key string if successful, False otherwise

Message Format

```
{
  "e": "aggTrade",           # event type
  "E": 1499405254326,       # event time
  "s": "ETHBTC",           # symbol
  "a": 70232,               # aggregated tradeid
  "p": "0.10281118",       # price
  "q": "8.15632997",       # quantity
  "f": 77489,              # first breakdown trade id
  "l": 77489,              # last breakdown trade id
  "T": 1499405254324,       # trade time
  "m": false,              # whether buyer is a maker
  "M": true                 # can be ignored
}
```

**start\_all\_mark\_price\_socket** (*callback*, *fast=True*)

Start a websocket for all futures mark price data By default all symbols are included in an array. <https://binance-docs.github.io/apidocs/futures/en/#mark-price-stream-for-all-market> :param *callback*: callback function to handle messages :type *callback*: function :returns: connection key string if successful, False otherwise Message Format .. code-block:: python

```
[
  {
    "e": "markPriceUpdate", // Event type "E": 1562305380000, // Event time "s": "BT-
    CUSDT", // Symbol "p": "11185.87786614", // Mark price "r": "0.00030000", //
    Funding rate "T": 1562306400000 // Next funding time
  }
]
```

**start\_all\_ticker\_futures\_socket** (*callback*)

Start a websocket for all ticker data By default all markets are included in an array. <https://binance-docs.github.io/apidocs/futures/en/#all-book-tickers-stream> :param *callback*: callback function to handle messages :type *callback*: function :returns: connection key string if successful, False otherwise Message Format .. code-block:: python

```
[
  {
    "u":400900217, // order book updateId "s":"BNBUSDT", // symbol
    "b":"25.35190000", // best bid price "B":"31.21000000", // best bid qty
    "a":"25.36520000", // best ask price "A":"40.66000000" // best ask qty
  }
]
```

**start\_book\_ticker\_socket** (*callback*)

Start a websocket for the best bid or ask's price or quantity for all symbols.

<https://github.com/binance-exchange/binance-official-api-docs/blob/master/web-socket-streams.md#all-book-tickers-stream>

**Parameters** *callback* (*function*) – callback function to handle messages

**Returns** connection key string if successful, False otherwise

Message Format

```
{
  // Same as <symbol>@bookTicker payload
}
```

**start\_depth\_socket** (*symbol*, *callback*, *depth=None*, *interval=None*)

Start a websocket for symbol market depth returning either a diff or a partial book

<https://github.com/binance-exchange/binance-official-api-docs/blob/master/web-socket-streams.md#partial-book-depth-streams>

#### Parameters

- **symbol** (*str*) – required
- **callback** (*function*) – callback function to handle messages
- **depth** (*str*) – optional Number of depth entries to return, default None. If passed returns a partial book instead of a diff
- **interval** (*int*) – optional interval for updates, default None. If not set, updates happen every second. Must be 0, None (1s) or 100 (100ms)

**Returns** connection key string if successful, False otherwise

#### Partial Message Format

```
{
  "lastUpdateId": 160, # Last update ID
  "bids": [           # Bids to be updated
    [
      "0.0024",      # price level to be updated
      "10",          # quantity
      []             # ignore
    ]
  ],
  "asks": [          # Asks to be updated
    [
      "0.0026",      # price level to be updated
      "100",         # quantity
      []             # ignore
    ]
  ]
}
```

#### Diff Message Format

```
{
  "e": "depthUpdate", # Event type
  "E": 123456789,     # Event time
  "s": "BNBBTC",     # Symbol
  "U": 157,           # First update ID in event
  "u": 160,           # Final update ID in event
  "b": [             # Bids to be updated
    [
      "0.0024",      # price level to be updated
      "10",          # quantity
      []             # ignore
    ]
  ],
  "a": [             # Asks to be updated
```

(continues on next page)

(continued from previous page)

```

    [
        "0.0026", # price level to be updated
        "100",    # quantity
        [],      # ignore
    ]
]
}

```

**start\_individual\_symbol\_ticker\_futures\_socket** (*symbol, callback*)

Start a futures websocket for a single symbol's ticker data <https://binance-docs.github.io/apidocs/futures/en/#individual-symbol-ticker-streams> :param symbol: required :type symbol: str :param callback: callback function to handle messages :type callback: function :returns: connection key string if successful, False otherwise .. code-block:: python

```

{ "e": "24hrTicker", // Event type "E": 123456789, // Event time "s": "BTCUSDT", //
  Symbol "p": "0.0015", // Price change
}

```

**start\_isolated\_margin\_socket** (*symbol, callback*)

Start a websocket for isolated margin data

<https://binance-docs.github.io/apidocs/spot/en/#listen-key-isolated-margin>

**Parameters**

- **symbol** (*str*) – required - symbol for the isolated margin account
- **callback** (*function*) – callback function to handle messages

**Returns** connection key string if successful, False otherwise

Message Format - see Binance API docs for all types

**start\_kline\_socket** (*symbol, callback, interval='1m'*)

Start a websocket for symbol kline data

<https://github.com/binance-exchange/binance-official-api-docs/blob/master/web-socket-streams.md#klinecandlestick-streams>

**Parameters**

- **symbol** (*str*) – required
- **callback** (*function*) – callback function to handle messages
- **interval** (*str*) – Kline interval, default KLINE\_INTERVAL\_1MINUTE

**Returns** connection key string if successful, False otherwise

Message Format

```

{
  "e": "kline", # event type
  "E": 1499404907056, # event time
  "s": "ETHBTC", # symbol
  "k": {
    "t": 1499404860000, # start time of this bar
    "T": 1499404919999, # end time of this bar
    "s": "ETHBTC", # symbol
    "i": "1m", # interval
    "f": 77462, # first trade id
  }
}

```

(continues on next page)

(continued from previous page)

```

        "L": 77465, # last trade id
        "o": "0.10278577", # open
        "c": "0.10278645", # close
        "h": "0.10278712", # high
        "l": "0.10278518", # low
        "v": "17.47929838", # volume
        "n": 4, # number of
    ↪trades
        "x": false, # whether this bar is
    ↪final
        "q": "1.79662878", # quote volume
        "V": "2.34879839", # volume of active buy
        "Q": "0.24142166", # quote volume of active buy
        "B": "13279784.01349473" # can be ignored
    }
}

```

**start\_margin\_socket** (*callback*)

Start a websocket for cross-margin data

<https://binance-docs.github.io/apidocs/spot/en/#listen-key-margin>**Parameters** *callback* (*function*) – callback function to handle messages**Returns** connection key string if successful, False otherwise

Message Format - see Binance API docs for all types

**start\_miniticker\_socket** (*callback*, *update\_time=1000*)

Start a miniticker websocket for all trades

This is not in the official Binance api docs, but this is what feeds the right column on a ticker page on Binance.

**Parameters**

- **callback** (*function*) – callback function to handle messages
- **update\_time** (*int*) – time between callbacks in milliseconds, must be 1000 or greater

**Returns** connection key string if successful, False otherwise

Message Format

```

[
  {
    'e': '24hrMiniTicker', # Event type
    'E': 1515906156273, # Event time
    's': 'QTUMETH', # Symbol
    'c': '0.03836900', # close
    'o': '0.03953500', # open
    'h': '0.04400000', # high
    'l': '0.03756000', # low
    'v': '147435.80000000', # volume
    'q': '5903.84338533' # quote volume
  }
]

```

**start\_multiplex\_socket** (*streams*, *callback*)

Start a multiplexed socket using a list of socket names. User stream sockets can not be included.

Symbols in socket name must be lowercase i.e `bnbtc@aggTrade`, `neobtc@ticker`

Combined stream events are wrapped as follows: `{"stream": "<streamName>", "data": <rawPayload>}`

<https://github.com/binance-exchange/binance-official-api-docs/blob/master/web-socket-streams.md>

#### Parameters

- **streams** (*list*) – list of stream names in lower case
- **callback** (*function*) – callback function to handle messages

**Returns** connection key string if successful, False otherwise

Message Format - see Binance API docs for all types

**start\_options\_depth\_socket** (*symbol, callback, depth='10'*)

Subscribe to a depth data stream

<https://binance-docs.github.io/apidocs/voptions/en/#market-streams-payload-depth>

#### Parameters

- **symbol** (*str*) – required
- **callback** (*function*) – callback function to handle messages
- **depth** (*str*) – optional Number of depth entries to return, default 10.

**start\_options\_kline\_socket** (*symbol, callback, interval='1m'*)

Subscribe to a candlestick data stream

<https://binance-docs.github.io/apidocs/voptions/en/#market-streams-payload-candle>

#### Parameters

- **symbol** (*str*) – required
- **callback** (*function*) – callback function to handle messages
- **interval** (*str*) – Kline interval, default `KLINE_INTERVAL_1MINUTE`

**start\_options\_multiplex\_socket** (*streams, callback*)

Start a multiplexed socket using a list of socket names. User stream sockets can not be included.

Symbols in socket name must be lowercase i.e `bnbtc@aggTrade`, `neobtc@ticker`

Combined stream events are wrapped as follows: `{"stream": "<streamName>", "data": <rawPayload>}`

<https://binance-docs.github.io/apidocs/voptions/en/#account-and-trading-interface>

#### Parameters

- **streams** (*list*) – list of stream names in lower case
- **callback** (*function*) – callback function to handle messages

**Returns** connection key string if successful, False otherwise

Message Format - see Binance API docs for all types

**start\_options\_recent\_trades\_socket** (*symbol, callback*)

Subscribe to a latest completed trades stream

<https://binance-docs.github.io/apidocs/voptions/en/#market-streams-payload-latest-completed-trades>

#### Parameters

- **symbol** (*str*) – required

- **callback** (*function*) – callback function to handle messages

**start\_options\_ticker\_socket** (*symbol, callback*)

Subscribe to a 24 hour ticker info stream

<https://binance-docs.github.io/apidocs/voptions/en/#market-streams-payload-24-hour-ticker>

#### Parameters

- **symbol** (*str*) – required
- **callback** (*function*) – callback function to handle messages

**start\_symbol\_book\_ticker\_socket** (*symbol, callback*)

Start a websocket for the best bid or ask’s price or quantity for a specified symbol.

<https://github.com/binance-exchange/binance-official-api-docs/blob/master/web-socket-streams.md#individual-symbol-book-ticker-streams>

#### Parameters

- **symbol** (*str*) – required
- **callback** (*function*) – callback function to handle messages

**Returns** connection key string if successful, False otherwise

Message Format

```
{
  "u":400900217,      // order book updateId
  "s":"BNBUSDT",     // symbol
  "b":"25.35190000", // best bid price
  "B":"31.21000000", // best bid qty
  "a":"25.36520000", // best ask price
  "A":"40.66000000"  // best ask qty
}
```

**start\_symbol\_mark\_price\_socket** (*symbol, callback, fast=True*)

Start a websocket for a symbol’s futures mark price <https://binance-docs.github.io/apidocs/futures/en/#mark-price-stream> :param symbol: required :type symbol: str :param callback: callback function to handle messages :type callback: function :returns: connection key string if successful, False otherwise

Message Format .. code-block:: python

```
{ "e": "markPriceUpdate", // Event type "E": 1562305380000, // Event time "s": "BT-
  CUSDT", // Symbol "p": "11185.87786614", // Mark price "r": "0.00030000", // Fund-
  ing rate "T": 1562306400000 // Next funding time
}
```

**start\_symbol\_ticker\_futures\_socket** (*symbol, callback*)

Start a websocket for a symbol’s ticker data By default all markets are included in an array. <https://binance-docs.github.io/apidocs/futures/en/#individual-symbol-book-ticker-streams> :param symbol: required :type symbol: str :param callback: callback function to handle messages :type callback: function :returns: connection key string if successful, False otherwise .. code-block:: python

```
[
  { "u":400900217, // order book updateId "s":"BNBUSDT", // symbol
    "b":"25.35190000", // best bid price "B":"31.21000000", // best bid qty
    "a":"25.36520000", // best ask price "A":"40.66000000" // best ask qty
  }
]
```

]

**start\_symbol\_ticker\_socket** (*symbol*, *callback*)

Start a websocket for a symbol's ticker data

<https://github.com/binance-exchange/binance-official-api-docs/blob/master/web-socket-streams.md#individual-symbol-ticker-streams>

**Parameters**

- **symbol** (*str*) – required
- **callback** (*function*) – callback function to handle messages

**Returns** connection key string if successful, False otherwise

Message Format

```
{
  "e": "24hrTicker", # Event type
  "E": 123456789, # Event time
  "s": "BNBBTC", # Symbol
  "p": "0.0015", # Price change
  "P": "250.00", # Price change percent
  "w": "0.0018", # Weighted average price
  "x": "0.0009", # Previous day's close price
  "c": "0.0025", # Current day's close price
  "Q": "10", # Close trade's quantity
  "b": "0.0024", # Best bid price
  "B": "10", # Bid bid quantity
  "a": "0.0026", # Best ask price
  "A": "100", # Best ask quantity
  "o": "0.0010", # Open price
  "h": "0.0025", # High price
  "l": "0.0010", # Low price
  "v": "10000", # Total traded base asset volume
  "q": "18", # Total traded quote asset volume
  "O": 0, # Statistics open time
  "C": 86400000, # Statistics close time
  "F": 0, # First trade ID
  "L": 18150, # Last trade Id
  "n": 18151 # Total number of trades
}
```

**start\_ticker\_socket** (*callback*)

Start a websocket for all ticker data

By default all markets are included in an array.

<https://github.com/binance-exchange/binance-official-api-docs/blob/master/web-socket-streams.md#all-market-tickers-stream>

**Parameters** **callback** (*function*) – callback function to handle messages**Returns** connection key string if successful, False otherwise

Message Format

```
[
  {
    'F': 278610,
    'o': '0.07393000',
```

```

**start\_trade\_socket** (*symbol*, *callback*)

Start a websocket for symbol trade data

<https://github.com/binance-exchange/binance-official-api-docs/blob/master/web-socket-streams.md#trade-streams>

**Parameters**

- **symbol** (*str*) – required
- **callback** (*function*) – callback function to handle messages

**Returns** connection key string if successful, False otherwise

## Message Format

```

{
  "e": "trade",      # Event type
  "E": 123456789,   # Event time
  "s": "BNBBTC",    # Symbol
  "t": 12345,       # Trade ID
  "p": "0.001",     # Price
  "q": "100",       # Quantity
  "b": 88,          # Buyer order Id
  "a": 50,          # Seller order Id
  "T": 123456785,   # Trade time
  "m": true,        # Is the buyer the market maker?
  "M": true         # Ignore.
}

```

**start\_user\_socket** (*callback*)

Start a websocket for user data

<https://github.com/binance-exchange/binance-official-api-docs/blob/master/user-data-stream.md> <https://binance-docs.github.io/apidocs/spot/en/#listen-key-spot>

**Parameters** **callback** (*function*) – callback function to handle messages

**Returns** connection key string if successful, False otherwise

Message Format - see Binance API docs for all types

**stop\_socket** (*conn\_key*)

Stop a websocket given the connection key

**Parameters** **conn\_key** (*string*) – Socket connection key

**Returns** connection key string if successful, False otherwise
